Earth Science

McDougal

Littell/Houghton Mifflin Explorations in Earth

Science contains a collection of 68

laboratory

investigations that can be incorporated into an Earth science course that covers geology, weather, climate, astronomy, and environmental issues.

The variety of the exercises contained in the manual provides instructors with the flexibility to use those that suit their individual preferences and which they view as essential for their students. Included is a Prologue that contains activities that address

the skills and concepts that are integrated throughout an Earth science course. The investigations are aligned with the New York State Math, Science, and Technology Standards and the National Science Education Standards. Appendices in the manual correlate labs to the New York State Physical Setting/Earth Science Core Curriculum and several well-known textbooks. Also included are appendices containing the Earth Science Reference Tables required by the New York State Physical Setting Core Curriculum and supplementary charts teachers will find useful in delivering their courses. Incorporated into the

Teacher's Edition is an appendix suggesting Internet sites appropriate for each chapter. Each laboratory investigation contains clearly stated instructions, report sheets, and questions that reflect both the procedural techniques and results students should obtain. Many labs can be adapted to an inquiry/problem-solving approach in which the written activity would often serve the teacher as a guide, but might not be used by students. The Teacher's Edition contains an array of suggested long-term investigations, an equipment and supplies list, and a comprehensive guide preceding each activity. This section is of great use to veteran

teachers and is most valuable to teachers new to teaching Earth Science.

Holt Earth Science

Earth Science Review Book is user friendly for both the teacher and the student. Since the content is aligned

with the New York State Core Curriculum for Physical Setting/Earth Science, a teacher can feel confident that all the required topics are sufficiently developed. The suggested outline of units moves from the concrete material to the more abstract subjects such as meteorology and astronomy. Throughout the book there is ample opportunity for review of basic skills and ways to tie in the various units. For example, isolines are discussed early in the year and then revisited later in the weather topics. The student has the opportunity to use the book as both a reference and a workbook. The extensive number of constructed response

items as well as multiple choice questions found interspersed within the topics give ample practice. The multiple Regents Exams found at the back of the book can be used both at the end of the course for review and whenever appropriate throughout the year. [UPCO's Physical Setting Review](#) Prepares students for the new standards and the commencement level PS/Earth Science Test. Challenges with content-based, multiple choice, short and extended constructed-response questions. Features process skills activities in information systems, interconnectedness, and interdisciplinary problem solving,. Correlates PS/Earth Science key ideas on

Earth dimensions, rocks and minerals, dynamic crust, surface processes, water cycle and climate, astronomy, and environmental awareness. Fosters mastery with practice on four recent tests for practice.
