Does what economies export matter for development? If so, can industrial policies improve on the export basket generated by the market? This book approaches these questions from a variety of conceptual and policy viewpoints. Reviewing the theoretical arguments in favor of industrial policies, the authors first ask whether existing indicators allow policy makers to identify growth-promoting sectors with confidence. To this end, they assess, and ultimately cast doubt upon, the reliability of many popular indicators advocated by proponents of industrial policy. Second, and central to their critique, the authors document extraordinary differences in the performance of countries exporting seemingly identical products, be they natural resources or 'high-tech' goods. Further, they argue that globalization has so fragmented the production process that even talking about exported goods as opposed to tasks may be misleading. Reviewing evidence from history and from around the world, the authors conclude

that policy makers should focus less on what is produced, and more on how it is produced. They analyze alternative approaches to picking winners but conclude by favoring 'horizontal-ish' policies--for instance, those that build human capital or foment innovation in existing and future products that only incidentally favor some sectors over others.

Options for a Job-Rich Growth Lexington Books

Skilled technical occupations"defined as occupations that require a high level of knowledge in a technical domain but do not require a bachelor's degree for entry"are a key component of the U.S. economy. In response to globalization and advances in science and technology, American firms are demanding workers with greater proficiency in literacy and numeracy, as well as strong interpersonal, technical, and problem-solving skills. However, employer surveys and industry and government reports have raised concerns that the nation may not have an adequate supply of skilled technical workers to achieve its competitiveness and economic growth objectives. In response to the broader need for policy information and advice, *Building America's Skilled Technical Workforce* examines the coverage, effectiveness, flexibility, and coordination of the policies and various programs that prepare Americans for skilled technical jobs. This report provides action-oriented recommendations for improving the American system of technical education, training, and certification.

Latin America and the Caribbean will soon face the challenges of an aging population. This process, which took over a century in the rich world, will occur in two or three decades in the developing world; seven of the 25 countries that will age more rapidly are in LAC. Population aging will pose challenges and offer opportunities. This book explores three sets of issues. First is a group of issues related to the support of the aging and poverty in the life cycle. This covers questions of work and retirement, income and wealth, and living arrangements and intergenerational transfers. It also explores the relation between the life cycle and poverty. Second is the question of the health transition. How does the demographic transition impact the health status of the population and the demand for health care? And how advanced is the health transition in LAC? Third is an understanding of the fiscal pressures that are likely to accompany population aging and to disentangle the role of demography from the role of policy in that process. This book provides an introduction to the concepts and techniques at the intersection of demography and economics. It summarizes the policy debate about potential reforms needed to make population aging an opportunity for development.

The Dominican Republic has posted high rates of output and productivity growth, but labor market indicators have remained weak during the past 20 years. This paper documents these trends, showing that the rapid productivity growth originates in a few sectors, while the bulk of job creation is concentrated elsewhere. The speed of job creation has not been enough to raise employment rates, and lackluster real earnings along with still-rampant labor

market informality suggest that most of the new jobs are of low quality. Low real wages and low labor force participation suggest the need of raising market wages above fallback incomes to attract individuals to the labor force. For that, measures to improve education and reduce product market distortions would be helpful.

Designing and Conducting Effective Development Evaluations DEBATE

'The Road to Results: Designing and Conducting Effective Development Evaluations' presents concepts and procedures for evaluation in a development context. It provides procedures and examples on how to set up a monitoring and evaluation system, how to conduct participatory evaluations and do social mapping, and how to construct a "rigorous" quasi-experimental design to answer an impact question. The text begins with the context of development evaluation and how it arrived where it is today. It then discusses current issues driving development evaluation, such as the Millennium Development Goals and the move from simple project evaluations to the broader understandings of complex evaluations. The topics of implementing 'Results-based Measurement and Evaluation' and constructing a 'Theory of Change' are emphasized throughout the text. Next, the authors take the reader down 'the road to results, ' presenting procedures for evaluating projects, programs, and policies by using a 'Design Matrix' to help map the process. This road includes: determining the overall approach, formulating questions, selecting designs, developing data collection instruments, choosing a sampling strategy, and planning data

analysis for qualitative, quantitative, and mixed method evaluations. The book also includes discussions on conducting complex evaluations, how to manage evaluations, how to present results, and ethical behavior--including principles, standards, and guidelines. The final chapter discusses the future of development evaluation. This comprehensive text is an essential tool for those involved in development evaluation. Does What You Export Matter? Una obra de actualidad donde se presenta al gran público el espinoso tema de los impuestos y los principales factores que han ocasionado la profunda ineficacia tributaria del Estado mexicano. Tenemos un Estado frágil, con una baja capacidad recaudatoria e incapaz de hacer que se cumpla plenamente la ley. El país no ha encontrado un equilibrio fiscal justo, eficaz

y sostenible. El pacto fiscal vigente en México -el cual incluye tanto el cobro de impuestos como el monto y destino de los recursos públicos- no parece responder a las urgentes necesidades del país porque descansa sobre tres debilidades: cobrar poco, gastar mal -con amplios espacios para la corrupción- y gastar significativamente más de lo que se obtiene a través de impuestos gracias al ingreso petrolero. A partir de este diagnóstico, Carlos Elizondo Mayer-Serra posa la mirada en las zonas más preocupantes de nuestra vida pública: tenemos servicios públicos de mala calidad, somos testigos de los efectos de la desigualdad, la violencia campea a sus anchas. ¿Qué hacer? El autor propone fundar un nuevo pacto fiscal. Es necesario convencer a la sociedad de que los impuestos son necesarios y deseables, pero para ello se requiere que el gasto público sea de calidad y pertinente. No en balde las democracias, cuando saben gastar bien, suelen recaudar más que los regímenes autoritarios. Aunque ofrece un panorama retrospectivo que parte de los gobiernos autoritarios priistas, Con dinero y sin dinero fija su atención en las dos administraciones panistas, las cuales desaprovecharon la alternancia para construir el pacto fiscal propio de una democracia, y permitieron se acentuaran algunos de los problemas que heredaron, como un federalismo fiscal basado en gobiernos locales que recaudan poco y gastan mal y millones de mexicanos en la informalidad que no contribuyen a la hacienda pública en la medida de sus posibilidades. Una preocupación más se hace patente en sus páginas: hay regiones en las que el poder del Estado, incluso en su tarea de recaudar, ha sido puesto en entredicho por las mafias criminales que cobran extorsiones en muchas zonas del país. Conviene, pues, insistir: necesitamos un nuevo pacto fiscal, uno que se base en una democracia efectiva donde se perciba una mejora en el nivel y en la calidad de vida de los mexicanos a través de un gasto público de calidad.
