The Clinics

Collections titles take a multidisciplinary approach to today's practice of medicine, selecting the most recent and relevant articles from the Clinics series and combining them into a single source of information on a focused topic. Articles are chosen from multiple Clinics to highlight the range of specialties covering major medical issues, delivering the information needed for successful interdisciplinary teamwork and effective patient care. Written from a variety of medical perspectives, these articles offer deeper insight into how each specialty cares for its patients and provide a unique entry into sharing best concepts for the entire medical team. Clinics Collections: Precision Medicine draws from Elsevier's Clinics Review Articles database to provide today's medical teams with practical clinical advice and insights on this timely medical model. It guides readers on how to apply current primary research findings to everyday practice, keep up with new and improved treatment methods, and improve patient outcomes. Areas of focus include breast cancer, lung cancer, melanoma, arthritis, sleep medicine, and pediatric oncology.

Each article begins with keywords and key points for immediate access to the most critical information. Articles are presented in an easy-to-digest and concisely worded format.

Gynecologic Cancers

Lippincott Williams & Wilkins
Breast Cancer: Over the course of the last decade, the treatment of breast cancer has evolved quite rapidly. New scientific and clinical advances

have modified the standard of care and led to improved patient outcomes. At the same time, the treatment of breast cancer has become increasingly complex, requiring the comprehensive review and assessment of multiple issues, genetics, radiology, surgery, reconstruction, fertility radiation, chemotherapy, and more. As a result the harmony and communication

between these specialties facilitated by a multidisciplinary team approach are crucial in providing the best care to patients and ensuring successful treatment. Breast Cancer: A Multidisciplinary Approach to Diagnosis and Management, written by a multidisciplinary team of authors representing a range of disciplines, is a valuable resource for physicians, fellows,

nurses, physician assistants, physical therapists, and all health care providers involved in the treatment of breast cancer. Breast Cancer: A Multidisciplinary Approach to Diagnosis and Management summarizes the state-of-the-art issues related to the treatment of breast cancer and describes an approach for optimal multidisciplinary care for women who have been diagnosed with breast cancer or who are at higher risk to develop breast cancer. About the Series The Current Multidisciplinary Oncology series edited by Charles R. Thomas consolidates and integrates the varied aspects of multidisciplinary care for major topics in oncology, including breast, lung, prostate, head and neck and more. The volumes in the Current Multidisciplinary Oncology series represent all related topic areas, including oncology, radiation oncology, pain, pathology, imaging, psychological support and the primary disease. In addition, each volume includes a chapter focusing on special populations and the disease's impact / difference on them, and discussion of future directions and quality of life issues.  This book seeks to promote an integrated approach among the various specialists involved in the management of rectal cancer with a view to ensuring that treatment is tailored appropriately to the individual patient. For ease of use, a question and answer format is employed. The focus is

on those issues typically confronted during daily clinical practice in relation to risk factors, imaging, surgery, and chemotherapy . The services of an outstanding panel of authors representative of the major European oncological societies have been acquired in order to formulate the questions and provide the answers. All who need assistance in

addressing concerns that arise from the need for multidisciplinary management of rectal cancer will find the book to be an ideal source of helpful information.
Neuroendocrine Tumors: A Multidisciplinary Approach
 CRC Press
 The second edition of this book is intended as a definitive text on biliary tract and gallbladder cancers. Specifically, it will serve as a single-source reference on

the current knowledge base for the multidisciplinary management of such cancers and thus covers epidemiological, surgical, radiotherapy, and chemotherapy approaches. A key feature is the demonstration of the impact of cutting-edge technical knowledge on treatment; for example, interventional radiology techniques, novel surgical approaches, and image-guided radiation

therapy are all extensively discussed. Diagnosis is also considered in detail, with coverage of novel serum biomarkers, pathologic staging, molecular profiling, and the full range of current and emerging imaging strategies. This book will be an invaluable source of information on new techniques for experienced practitioners, yet is sufficiently concise to offer an

introduction to the field for students and community practitioners. Cases in Head and Neck Cancer Springer Science & Business Media This book is primarily a symptom-based guide to Breast and Gynecologic Imaging. Most clinical publications focus on a specific pathology such as "Imaging and/or management of ovarian cancer," but in clinical practice,

patients do not present with a diagnosis. Physicians are presented with clinical symptoms, and appropriate use of imaging after a clinical assessment is critical from the point of view of effective intervention to treat a patient. CMS now mandates a clinical decision support system to justify imaging. This is based on making use of appropriate modalities for specific

clinical problems that are deemed so by professional society guidelines. In an era of emphasis on cost effective, high quality health care delivery, it is critical for clinicians in training and practice to have a resource that outlines scientifically sound and professional society endorsed criteria for appropriate work up of patients' symptoms. This book applies this

symptom-based approach to women's health. Authors are focused on providing a scientifically proven resource to gynecologists, obstetricians, radiologists and internists involved in the management of common symptoms affecting women. Each chapter is based on a common breast or gynecological problem and how patients are triaged for imaging. The implications of the findings

and the most appropriate management of the patient are also presented. The text focuses on providing the most effective methods currently available to investigate commonly encountered symptoms in women's health. In addition, there are chapters that outline rationale of screening for breast cancer in women with an average risk and those with an elevated risk for breast cancer as well

as a clinician guide to understanding multidisciplinary approach to the Breast cancer patient. This is an ideal guide for gynecologists, obstetricians, radiologists, and internists working in women's health. A Multidisciplinary Approach to Diagnosis and Management Springer This book provides an exhaustive review of the current state of the art in the management of prostate

cancer, from screening to treatment. A particular feature is the emphasis placed on the value of a multidisciplinary approach. The opening chapters address basic aspects including epidemiology, biology, and chemoprevention. The role of individual and mass screening is carefully appraised, and diagnosis, clinical work-up, and the role of active surveillance are discussed in detail. Subsequent

chapters are devoted to each of the therapies that may be employed, including open and robotic laparoscopic radical prostatectomy, the various forms of radiation therapy, high-intensity focused ultrasound, cryotherapy, hormonal therapy, and targeted therapies and vaccination. Up-to-date data from clinical trials are included. The editors are members of the EORTC who have

coordinated phase III EORTC trials and have worldwide reputations.

However, while a large body of

evidence regarding outcomes following pelvic exenteration now exists, practical strategies and management options remain unclear. Surgical Management of Advanced Pelvic Cancer addresses this problem by assembling world-leaders in the field to provide insights into the latest techniques and best practices. It includes detailed coverage of: Surgical

anatomy Operative approaches and exenterative techniques Reconstruction options Current evidence on survival and quality of life outcomes Featuring essential information for those managing patients with advanced pelvic neoplasms, Surgical Management of Advanced Pelvic Cancer consolidates the latest data and practical advice in one indispensable guide.

Cancer Management : a Multidisciplinary Approach
 Plural Publishing A multidisciplinary understanding of the various processes leading to colorectal cancer progression is important for creating promising methods of therapy. Therefore it is

necessary to scrutinize the progression of cancer and the therapeutic process through various academic theories. This book examines colorectal cancer - its prevention, pathogenesis, and treatment - through a multidisciplinary lens in an effort to advance understanding of the disease and improve therapeutic efficacy.

A Multidisciplinary Approach to Diagnosis and

Management
Lippincott Williams & Wilkins
Hadron therapy is a groundbreaking new method of treating cancer. Boasting greater precision than other therapies, this therapy is now utilised in many clinical settings and the field is growing. More than 50 medical facilities currently perform (or are planned to perform) this treatment, with this number set to double by

2020. This new text covers the most recent advances in hadron therapy, exploring the physics, technology, biology, diagnosis, clinical applications, and economics behind the therapy. Providing essential and up-to-date information on recent developments in the field, this book will be of interest to current and aspiring specialists from a wide range of

backgrounds. Features: Multidisciplinary approach: explores the physics, IT (big data), biology, clinical applications from imaging to treatment, clinical trials, and economics associated with hadron therapy. Contains the latest research and developments in this rapidly evolving field, and integrates them into the current global challenges for radiation therapy. Edited by recognised leaders in the field, including the co-ordinator of ENLIGHT (the European Network for Light Ion Hadron Therapy), with chapter contributions from international leading experts in the field.

Management of Prostate Cancer John Wiley & Sons. The term 'carcinoid' entered medical literature over 100 years ago to describe a peculiar intestinal epithelial neoplasm. Since then, a large body of literature has expanded the concept of carcinoid, later replaced by the term 'NeuroEndocrine Tumor' (NET), defining a wide spectrum of peculiar tumors, potentially affecting all organs and tissues, originating from neuroendocrine cells, sharing, but, at the same time, keeping, pathognomonic pathological, radiological and clinical features. This book provides an

authoritative overview of the epidemiological, clinical, genetic, molecular and pathological characteristics of NETs and highlights the most relevant controversial issues in the classification, diagnosis and therapy. Furthermore the new frontiers in the field of medical therapies are presented, through a multidisciplinary and translational approach. Considering the fact that NETs have

been recently demonstrated less rare as considered so far, 'Neuroendocrine Tumors: A Multidisciplinary Approach' is a must read for endocrinologists, gastroenterologists, endocrine surgeons, as well as pathologists, nuclear medicine physicians and radiologists focused on NET.

This book, now in an extensively revised second edition, provides an exhaustive review of the state of the art in the management of prostate cancer, from screening to treatment, with emphasis on a multidisciplinary approach. The editors are very excited about the outstanding new or updated contributions from the different expert authors. The

opening chapters address basic aspects including epidemiology, pathology, biology, genetics, and chemoprevention. The role of individual and mass screening is carefully appraised, and extensive attention is devoted to diagnosis and clinical work-up by means of recently implemented investigations such as multiparametric MRI and choline PET-CT. The use of active surveillance is

examined in detail. Subsequent chapters discuss the different therapies that may be employed: open and minimally invasive, including robot-assisted, radical prostatectomy, the various forms of radiation treatment, high-intensity focused ultrasound, cryotherapy, hormonal manipulations, chemotherapy, targeted therapies, and immunotherapy. Up-to-date results from

practice-changing phase III randomized clinical trials are included and special insights are provided into the interpretation of results and the patient's perspective. Multidisciplinary Approach for Colorectal Cancer Springer Despite significant progress in the treatment of head and neck cancer using new techniques, including organ preservation strategies, recurrence

still occurs in up to 50% of patients with locally advanced disease. Head and Neck Cancer Recurrence is the first comprehensive, evidence-based reference on this complex condition, providing state-of-the-art strategies for treating and managing recurrence at each site within the head and neck. With this book at hand, specialists will have guidelines for detecting the

presence of a tumor, evaluating the extent and likelihood of successful salvage, determining the most effective treatment modalities, and assessing the potential impact on outcome and function. Special features: Brings together all the current evidence and expertise on the epidemiology, risk factors, clinical and imaging evaluation, and management

of recurrent head and neck cancer tumors. Includes both curative and palliative approaches, and discusses surgical, radiotherapeutic, and chemotherapeutic strategic options. Contains substantial contributions by specialists in speech and language therapy, palliative care, psychology, epidemiology, and clinical cancer nursing to provide a holistic, multidisciplinary approach to the management

of recurrence of head and neck cancers Brings the decision-making process to life with illustrative case studies that contain patient histories, clinical findings, treatment planning, and documented results The combination of the most recent clinical advances with the latest thinking in the field makes this book an essential resource for all head and neck surgeons,

clinical oncologists, radiation oncologists, nurse practitioners, allied health professionals and senior trainees working to improve patient management and outcomes in this challenging arena. From Screening to Multidisciplinary Management, Third Edition Demos Medical Publishing Cases in Head and Neck Cancer: A Multidisciplinary Approach

encompasses rich material and resources that demonstrate the complex interface between the diagnostic and clinical information necessary to successfully manage patients with head and neck cancer. This must-read book contains cases written by leading experts in the field that cover a wide variety of head and neck cancers (i.e., tongue base, tonsil, laryngeal, HPV related, etc.) and treatment

options, including minimally invasive surgery such as robotic surgery and combined modality treatment protocols. Specifically, this text addresses comprehensive cases from initial evaluation, diagnosis, imaging, and other physiological tests to multidisciplinary treatment management (surgery, chemotherapy, and radiation therapy). Additionally, approaches

for the management of toxicities or morbidities of cancer treatment are presented, as well as care plans, discharge plans, and caregiver burden and survivorship issues. Moreover, material on health literacy, humanistic care, and improving communication with assistive technology has been included. Written by clinicians specializing in speech-

language pathology, otolaryngology, medical and radiation oncology, pathology, nurse case management, radiology, dietetics, among other fields, this collection of authors provides one of the most complete presentations of the inner workings of the multidisciplinary care team. The adult cases of head and neck cancer reviewed in this text exemplify current practice

issues surrounding HPV, minimally invasive robotic surgery and combined modality treatments. Each author threads introductory comments throughout the cases illustrating the critical role of the speech-language pathologist, in particular, and how all clinicians must address coping with survivorship and caregiver burden issues. Cases in Head and Neck Cancer

intends to teach future medical practitioners how to approach the complexities associated with head and neck cancer. Its vast number of images and videos allow for experiential driven classroom activities. This text will be an invaluable resource for the education of speech-language pathologists, medical students, nurse care managers, dieticians, and any person

involved in a head and neck cancer team.

Written by a multidisciplinary team of experts involved in the development of standards and guidelines for its management in the USA, UK, Europe and Asia, the book contains succinct and knowledgeable summaries of the management of thyroid cancer. Every chapter describes a

different aspect of care, and provides clear and detailed information about caring for patients with this group of tumors. This is an invaluable reference to health care professionals, from primary to tertiary care, involved in the management of thyroid cancer such as clinical nurse specialists, clinical psychologists,

family medicine practitioners, specialists in palliative care (especially for anaplastic thyroid cancers), geneticists and surgeons, endocrinologists, oncologists, pathologists, and radiologists. *Precision Medicine: A Multidisciplinary Approach* Springer Science & Business Media Revised and

updated, this edition provides a comprehensive, authoritative approach to head and neck cancer. Page after page is packed with clear and instructive illustrations - line drawings and halftones; fibre optic and microscopic examinations; CT scans; before and after treatment figures; plus many full-colour illustrations.
