Political Advocacy and American Politics provides a detailed explanation as to why citizens engage in interpersonal advocacy in the United States. Sean Richey and J. Benjamin Taylor eloquently show how the campaigns, social media, and personality and partisanship affect one's propensity for candidates, which often leads to arguments about politics. Using original qualitative, survey, and experimental studies, Richey and Taylor demonstrate the causes of political advocacy over time in the political environment and at the individual level. While some worry about the incivility in American politics, Richey and Taylor argue political talk, where conflict is common, is caused by high-activity democratic processes and normatively

beneficial individual attributes.

Furthermore, Richey and Taylor argue that advocacy—when conceptualized as a democratic "release valve"—is exactly the kind of conflict we might expect in a vibrant democracy. Political Advocacy and American Politics: Why People Fight So Often About Politics is ideal for university students and researchers, yet it is also accessible to any reader looking to learn more about the role campaigns and personal attributes play in the decision to advocate.

The Evolution of Plants New Harbinger Publications

A CHOICE Magazine Outstanding Academic Title of 2018. A novel approach to understanding personality, based on evidence that we share more than we realize with other mammals. This book presents the wealth of scientific evidence that our personality emerges from evolved primary emotions shared by all mammals. Yes, your dog feels love—and many other things too. These subcortically generated emotions bias our actions, alter our perceptions, guide our learning, provide the basis for our thoughts and memories, and become regulated over the course of our lives. Understanding personality development from the perspective of

mammals is a groundbreaking approach, and one that sheds new light on the ways in which we as humans respond to life events, both good and bad. Jaak Panksepp, famous for discovering laughter in rats and for creating the field of affective neuroscience, died in April 2017. This book forms part of his lasting legacy and impact on a wide range of scientific and humanistic disciplines. It will be essential reading for anyone trying to understand how we act in the world, and the world's impact on us. *The Biology of Investing* ORACLE PRESS || PROGRAMMERS MIND USA

It presents new findings that have been obtained with respect to the correlates of personality traits, the dynamics of motives and goals in human lives, and the meanings and manifestations of life stories. This one’s special!”—Jim Cramer, host of CNBC’s Mad Money “Great tools for anyone wanting to dabble in the stock market.”—USA Today Phil Town is a very wealthy man, but he wasn’t always. In fact, he was living on a salary of \$4,000 a year when some well-timed advice launched him down a highway of investing self-education that revealed

what the true “rules” are and how to make them work in one’s favor. Chief among them, of course, is Rule #1: “Don’t lose money.” In this updated edition to the #1 national bestseller, you’ll learn more of Phil’s fresh, think-outside-the-box rules, including:

- Don’t diversify
- Only buy a stock when it’s on sale
- Think long term—but act short term to maximize your return
- And most of all, beat the big investors at their own game by using the tools designed for them!

As Phil demonstrates in these pages, giant mutual funds can’t help but regress to the mean—and as we’ve all learned in recent years, that mean could be very disappointing indeed. Fortunately, Rule #1 takes readers step-by-step through a do-it-yourself process, equipping even the

biggest investing-phobes with the tools they need to make quantum leaps toward financial security—regardless of where the market is headed.

'Essential Personality' provides a clear, accessible and systematic introduction to the major theoretical approaches for the understanding of human personality. This introductory book assumes no prior knowledge of this core area in

psychology and is written for students studying personality for the first time, whether at 'A' level, first year undergraduates on psychology degree programmes or students on other courses (for example, nursing, social work or criminology). Each chapter considers one or more of the major approaches to personality. For each approach, a brief biographical outline of the originating theorist is given. This is followed by clear and straightforward descriptions of the major aspects of each theory together with clear definitions of key concepts, and concludes with an evaluation section that addresses the 'model' of humans underlying the approach, research evidence in support of the theory and questioning the theory. Discussion is also given to personality

assessment and therapeutic applications of the theory or approach. The individual chapters provide figures, diagrams and tables to give a clear understanding of theory and research. and at the end of each chapter, a summary and suggestions for further reading is provided. A glossary at the end of the book provides definitions and explanations of key items, concepts etc. *The Cambridge Handbook of Psychology and Legal Decision-Making* Taylor & Francis
