"Cory Doctorow straps on his miner's helmet and takes you deep into the caverns and underground rivers of pop culture, here filtered through SF-colored glasses. Enjoy."-Neil Gaiman New York Times bestselling author Cory Doctorow has been hailed as one of the freshest voices in science fiction, and this collection of intriguing novellas is yet another reason why. Have you ever wondered what it's like to live through a bioweapon attack or to have every aspect of your life governed by invisible ants? In Cory Doctorow's collection of novellas, he wields his formidable experience in technology and computing to give us mind-bending sci-fi tales that explore the possibilities of information technology-and its various uses-run amok.

"Anda's Game" is a spin on the bizarre new phenomenon of "cyber sweatshops," in which people are paid very low wages to play online games all day in order to generate in-game wealth, which can be converted into actual money. Another tale tells of the heroic exploits of "sysadmins"-systems administrators-as they defend the cyberworld, and hence the world at large, from worms and bioweapons. And yes, there's a story about zombies, too. "He sparkles! He fizzes! He does backflips and breaks the furniture! Science fiction needs Cory Doctorow." -Bruce Sterling, award-winning author of Schismatrix Plus and The Difference Engine

*Little Robots* Koala Books

A fabulous collection spanning the galaxies and career of SF superstar Alastair Reynolds Reynolds' pursuit of truth is not limited to wide-angle star smashing - not that stars don't get pulverised when one character is gifted (or cursed) with an awful weapon by the legendary Merlin. Reynolds' protagonists find themselves in situations of betrayal, whether by a loved one's accidental death, as in 'Signal to Noise', or by a trusted wartime authority, in 'Spirey and the Queen'. His fertile imagination can resurrect Elton John on Mars in 'Understanding Space and Time' or make prophets of the human condition out of pool-cleaning robots in the title story. But overall, the stories in ZIMA BLUE represent a more optimistic take on humanity's future, a view that says there may be wars, there may be catastrophes and cosmic errors, but something human will still survive.

This fun first board book with neon-bright pictures shows it's never too early - or late! - to learn about big ideas, and build confidence in science. Just like your little one, Baby Robot is a brilliant scientist in the making. He wants to know how to fly to the Moon, so Rose-bot tells him about rocket science. Based on his firsthand experiences, Baby Robot has imaginative ideas for getting to space. Rose-bot explains why he can't climb there or fly in a plane, helicopter, or balloon. She knows you need a rocket, and she tells Baby Robot all about how space rockets work. The first title in a series of STEM books for babies, Baby Robot Explains... Rocket Science is the perfect way to bring science to life for little ones. Humorous illustrations, with bright, popping neon color, and a read-aloud, picture book story are combined with very simple scientific explanations - written with the help of science consultant Lisa Burke - to make the topic accessible.

*A Psalm for the Wild-Built* Barefoot Books

Rusty is a friendly robot, but not a very happy one; he's feeling down about the way that he sounds. The other robots on Planet Robotone - Belle, Twango, Hoot and Boom-Bot - show Rusty that being a little bit different is the best way to be, and together make a raucous song and dance that celebrates their differences. This charming story about friendship, self-discovery and the strength of pooling everyone's talents together has a strong, empowering message of acceptance and embracing individuality. With wonderful, contemporary illustrations that will appeal to young children and parents alike, the story will provoke thought - and conversation - about being different, and how we should all embrace our characteristics and be comfortable and confident in ourselves.

Winner of the Hugo Award! In A Psalm for the Wild-Built, bestselling Becky Chambers's delightful new Monk and Robot series, gives us hope for the future. It's been centuries since the robots of Panga gained self-awareness and laid down their tools; centuries since they wandered, en masse, into the wilderness, never to be seen again; centuries since they faded into myth and urban legend. One day, the life of a tea monk is upended by the arrival of a robot, there to honor the old promise of checking in. The robot cannot go back until the question of "what do people need?" is answered. But the answer to that question depends on who you ask, and how. They're going to need to ask it a lot. Becky Chambers's new series asks: in a world where people have what they want, does having more matter? At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
