Workbook for Modern Carpentry
McGraw-Hill Education

If you're interested in advancing your skills as a stair builder or someone who desperately needs to understand the fundamentals of stair stringer layout, then the advanced methods inside this book, we'll take you to the next level. Master Stair Builder - Greg Vanden Berge will share some of the extraordinary fundamentals as well as advanced techniques, few carpenters in the world are familiar with. This is a one-of-a-kind book and was written in a simple and easy to understand format. There are plenty of illustrations and even my wife, who is extremely skeptical about my other books said this was one of the best books I've written so far. This book was written for carpenters, contractors and even sophisticated do-it-yourselfers. I don't recommend this book to anyone who doesn't understand the fundamentals of stair building.

Complementing Book 1 of the same title, this text takes the student up to the City and Guilds full Craft Certificate level. All aspects of the course are dealt with, along with the associated scientific background, mathematical calculations and drawings required. Although prior knowledge of the subject as provided in Book 1 is assumed, important principles are repeated so that this book can be read independently of the companion volume. Extensively illustrated, each chapter begins with clearly defined objectives and concludes with a series of questions and assignments. The text will prove invaluable as a general workbook for those following advanced woodworking courses, including CITB students and self-employed carpenters, joiner and builders. It is useful supplementary reading for

those taking courses in brickwork and cabinetmaking, for trainee woodworking machinists and construction technicians as well as for students of City and Guilds Foundation courses.
