Public History: A Textbook of Practice is a guide to the many challenges historians face while teaching, learning, and practicing public history. Historians can play a dynamic and essential role in contributing to public understanding of the past, and those who work in historic preservation, in museums and archives, in government agencies, as consultants, as oral historians, or who manage crowdsourcing projects need very specific skills. This book links theory and practice and provides students and practitioners with the tools to do public history in a wide range of settings. The text engages throughout with key issues such as public participation, digital tools and media, and the internationalization of public history. Part One focuses on public history sources, and offers an overview of the creation, collection, management, and preservation of public history materials (archives, material culture, oral materials, or digital sources). Chapters cover sites and institutions such as archival repositories and museums, historic buildings and structures, and different practices such as collection management, preservation (archives, objects, sounds, moving images, buildings, sites, and landscape), oral history, and genealogy. Part Two deals with the different ways in which public historians can produce historical narratives through different media (including exhibitions, film, writing, and digital tools). The last part explores the challenges and ethical issues that public historians will encounter when working with different communities and institutions. Either in public history methods courses or as a resource for practicing public historians, this book lays the groundwork for making meaningful connections between historical sources and popular audiences.

In the waning years of the Cold War, the United States and China began to cautiously engage in cultural, educational, and policy exchanges, which in turn strengthened new security and economic ties. These links have helped shape the most important bilateral relationship in the late-twentieth and early twenty-first centuries. This book explores the dynamics of cultural exchange through an in-depth historical investigation of three organizations at the forefront of U.S.-China non-governmental relations: the Hopkins-Nanjing Center for Chinese and American Studies, the National Committee on United States-China Relations, and The 1990 Institute. Norton Wheeler reveals the impact of American non-governmental organizations (NGOs) on education, environment, fiscal policy, and civil society in contemporary China. In turn, this book illuminates the important role that NGOs play in complementing formal diplomacy and presents a model of society-to-society relations that moves beyond old debates over cultural imperialism. Finally, the book highlights the increasingly significant role of Chinese Americans as bridges between the two societies. Based on extensive archival research and interviews with leading American and Chinese figures, this book will be of interest to students and scholars of Chinese politics and history, international relations and transnational NGOs.

In recent years, American art scholars have increasingly focused on the importance of cross-cultural exchanges during the nineteenth century. As essayist François Brunet puts it, mid-nineteenth century landscapes were “transnational . . . permeated by complex transactions where ‘American’ originality produced itself not only in imitation of or reaction against ‘European’ influences, . . . but as critical mirroring and incorporating of ‘European’ images.” Articles in this collection make clear that the “conversation of cultures” went both ways, with American artworks and culture also affecting European artistic and literary practice. Essays explore the transnational

origin of many types of American artworks, from stained glass windows, which usually copied their European originals with great exactitude, to paintings and sculptures using distinctly American motifs, such as the Puritan and the cowboy, to distinguish American art students from their Parisian masters. It also examines American cultural icons, particularly the American Indian, appropriated by European writers, artists, and philosophers to embody primeval wisdom. A distinguished international group of scholars, including Brunet, Robert Rydell, and Peter Gibian, offer valuable perspectives on the ever-broadening field of transnational cultural studies.

ABOUT THE BOOK Social media marketing is quickly becoming a crucial aspect of promoting any business: free and easy-to-learn platforms such as Facebook, Twitter, and Pinterest mean that businesses of all sizes can interact effectively with their target markets in our 21st century world. Many entrepreneurs successfully use these social media platforms as a way to market their businesses online, and you can too. As one of the most quickly growing social media platforms, CNN reports that according to Experian Marketing Services 2012 Digital Marketing Trend Report, Pinterest ranks number three on the list of most visited social sites, behind Facebook and Twitter. In the month of February alone, Pinterest attracted new users at an astonishing rate, increasing traffic to the site by fifty percent. The study also found that over ninety percent of adult internet users regularly visit one or more social media sites. Want to learn how to use this powerful tool to your fullest advantage? MEET THE AUTHOR A former financial adviser with over a decade of experience in personal finance and small business banking, Sarita Harbour is a professional freelance writer specializing in small business, personal finance, and content marketing techniques. This is a collection of peer-reviewed papers originally presented at the 19th Australasian Conference on the Mechanics of Structures and Materials by academics, researchers and practitioners largely from Australasia and the Asia-Pacific region. The topics under discussion include: composite structures and materials; computational mechanics; dynamic analysis of structures; earthquake engineering; fire engineering; geomechanics and foundation engineering; mechanics of materials; reinforced and prestressed concrete structures; shock and impact loading; steel structures; structural health monitoring and damage identification; structural mechanics; and timber engineering. It is a valuable reference for academics, researchers, and civil and mechanical engineers working in structural and material engineering and mechanics.

Patents for Inventions. Abridgments of Specifications Georg Thieme Verlag

Ever since its early modern inception as a literary genre unto its own, the fairy tale has frequently provided authors with a textual space in which to reflect on the nature, status and function of their own writing and that of literature in general. At the same time, it has served as an ideal laboratory for exploring and experimenting with the boundaries of literary convention and propriety. While scholarship pertaining to these phenomena has focused primarily on the fairy-tale adaptations and deconstructions of postmodern(ist) writers, this essay collection adopts a more diachronic approach. It offers fairy-tale scholars and students a series of theoretical and literary-historical expositions, as well as case studies on English, French, German, Swedish, Danish, and Romanian texts from the seventeenth to the twenty-first century, by authors as diverse as Marie-Catherine d'Aulnoy, Rikki Ducornet, Hans Christian Andersen and Robert Coover.

Although industry has been leveraging the advancements of component-oriented development and assembly (CODA) technology for some time, there has long been a need for a book that provides a complete overview of the multiple technologies that support CODA. Filling this need, *Component-Oriented Development and Assembly* supplies comprehensive coverage of the principles, practice, and paradigm of component-oriented development and assembly. The first part of the book provides the conceptual foundation for component-oriented software. Part II focuses on the various standard Java component models and describes how to develop a component-oriented system using these component models. Part III covers the various aspects of the component-oriented

development paradigm. Based on the authors' research and teaching experience, the text focuses on the principles of component-oriented software development from a technical concepts perspective, designer's perspective, programmer's perspective, and manager's perspective. Covering popular component development frameworks based on Java, it is suitable as a textbook for component-oriented software for undergraduate and postgraduate courses. It is also an ideal reference for anyone looking to adopt the component-oriented development paradigm. The book provides readers with access to all the source code used in the book on a companion site (<http://www.codabook.com>). The source code for the CODA implementation of the case study presented in Chapter 11 is also hosted on the website. The website will also serve as a technical forum for further discussions on the topic and for any updates to the book.

Ever since the invention of the telegraph, journalists have sought to remove the barriers of time and space. Today, we readily accept that reporters can jet quickly to a distant location and broadcast instantly from a satellite-connected, video-enabled cell phone hanging from their belts. But now that live news coverage is possible from virtually anywhere, is foreign correspondence better? And what are the implications of recent changes in journalistic technology for policy makers and their constituents? In *From Pigeons to News Portals*, edited by David D. Perlmutter and John Maxwell Hamilton, scholars and journalists survey, probe, and demystify the new foreign correspondence that has emerged from rapidly changing media technology. These distinguished authors challenge long-held beliefs about foreign news coverage, not the least of which is whether, in our interconnected world, such a thing as "foreign news" even exists anymore. Essays explore the ways people have used new media technology -- from satellites and cell phones to the Internet -- to affect content, delivery modes, and amount and style of coverage. They examine the ways in which speedy reporting conflicts with in-depth reporting, the pros and cons of "parachute" journalism, the declining dominance of mainstream media as a source of foreign news, and the implications of this new foreign correspondence for foreign policy. Entertainment media such as film, television, and video gaming form worldwide opinions about America, often in negative ways. Meanwhile, live reporting abroad is both a blessing and curse for foreign policy makers. Because foreign news is so vital to effective policy making and citizenship, we imperil our future by failing to understand the changes technology brings and how we can wrest the best practice out of those changes. This provocative volume offers valuable insights and analyses to help us better understand the evolving state of foreign news.
