At the completion of this critical bibliography which forms another step in the direction of the realization of the bibliographical project inaugurated in 1955 by Dr. Voorhoeve's survey of the languages of Sumatra, I acknowledge

with gratitude the valuable assistance received from various people. I am indebted to my colleagues Prof. Dr. G. W. J. Drewes, Dr. J. Noorduynd, Dr. Th. Pigeaud, Prof. Dr. A. Teeuw and Dr. P. Voorhoeve, who read all or part of the manuscript and who generously put their extensive knowledge of the Java languages at my disposal. Heartfelt thanks are due to Mr. B. J. Hoff and Mr. A. G. Sciarone, both members of my staff, who verified many of the bibliographical details. I am grateful to the library of the University of Leiden and to the library of the Institute in The Hague because of their readiness in giving me all the facilities I needed for the preparation of this book. Most useful was the cordial assistance received from my colleague Prof. Dr. P. E. de Josselin de

Jong, who spent much time correcting the many imperfections of my English text, which greatly promoted the readability of the narrative sections of this survey.

As the baby boom generation ages, it is crucial that designers understand all they can about bringing this group, as

well as all others, design that will offer function, aesthetics, and quality of life. Full of examples and illustrated with pictures of good design, *Universal Design: Principles and Models* details how the principles of universal design (UD) can be used to evaluate all products and places. Universal design is ubiquitous; therefore good examples are essential to understanding. This book includes more than 50 case studies that demonstrate successful applications of UD principles and helps professors develop curriculum and teaching strategies. More than 300 color photographs and drawings further illustrate the principles and best practices. The book includes topics ranging from the development of ergonomic chairs for home and office to

the unique environmental concerns of those sensitive to electronic and chemical emissions. The examples illustrate a variety of user/groups in different situations and clearly demonstrate the design directives for meeting their needs. The author explores the many definitions of UD, enabling readers to identify those most meaningful to large portions of the population. Universal design (UD) facilitates the comfort and navigation of those with failing eyesight or restricted mobility, and the family members and professionals who care for them. Whether at home, work, or a public place, people appreciate the beautiful and the practical. This book takes a vital and meaningful approach, going beyond the basics and delving into details. It

gets to the heart of UD and supplies an understanding of design from a greater perspective.

Eco-Resorts is a design guide for low impact, environmentally friendly tourist resorts in the tropics. The book is the

first to offer architects practical, detailed guidance in developing resort buildings that work with a tropical climate and meet the needs and expectations of the client and building inhabitants. The book includes both architectural design and material solutions, supported by theoretical principles, to present a sustainable approach to resort design. It demonstrates that tropical resort buildings do not necessarily require large energy input, in compliance with green building standards. Case studies show how principles of sustainable design have been successfully applied in tropical environments. * Written by an industry insider with practical design experience, knowledge and expertise. * Demonstrates design practices related to site planning and layout, and re-

assesses best practices for a tropical environment, allowing architects to apply design principles to their own projects. * Includes international case studies from several countries to illustrate best practice from a variety of tropical climate destinations around the world. Z (Zbigniew) Bromberek, PhD, is an architect educated and registered in Poland, and postgraduate-educated and residing in Australia. Z has been practising and teaching architecture for nearly 30 years. He has been involved and associated with various educational institutions and professional organizations in a number of countries around the world. Before the current appointment as Senior Lecturer in Architecture at the University of Tasmania, Z spent three years as

Lecturer in Environmental Design at the University of Queensland, and two years as Guest Professor in Architectural Design in Nanjing, PR China. He was also the President of the Architectural Science Association ANZAScA for three consecutive terms in 2000-05. Z's major research interests include design-environment interaction, low-impact architecture and re-integration of architecture as an expression of a multi-disciplinary approach to design.

Timber construction is one of the most prevalent methods of constructing buildings in North America and an increasingly significant method of construction in Europe and the rest of the world. Timber Engineering deals not

only with the structural aspects of timber construction, structural components, joints and systems based on solid timber and engineered wood products, but also material behaviour and properties on a wood element level. Produced by internationally renowned experts in the field, this book represents the state of the art in research on the understanding of the material behaviour of solid wood and engineered wood products. There is no comparable compendium currently available on the topic - the subjects represented include the most recent phenomena of timber engineering and the newest development of practice-related research. Grouped into three different sections, 'Basic properties of wood-based structural elements', 'Design aspects on timber structures'

and 'Joints and structural assemblies', this book focuses on key issues in the understanding of: timber as a modern engineered construction material with controlled and documented properties the background for design of structural systems based on timber and engineered wood products the background for structural design of joints in structural timber systems Furthermore, this invaluable book contains advanced teaching material for all technical schools and universities involved in timber engineering. It also provides an essential resource for timber engineering students and researchers, as well as practicing structural and civil engineers.

Maintenance Engineering Handbook

The Architects' Handbook provides a comprehensive range of visual and technical information covering the great majority of building types likely to be encountered by architects, designers, building surveyors and others involved in the construction industry. It is organised by building type and concentrates very much on practical examples. Including over 300 case studies, the Handbook is organised by building type and concentrates very much on practical examples. It includes:

- a brief introduction to the key design considerations for each building type
- numerous plans, sections and elevations for the building examples
- references to key technical standards and design guidance
- a comprehensive bibliography for most building types

The book also

includes sections on designing for accessibility, drawing practice, and metric and imperial conversion tables. To browse sample pages please see <http://www.blackwellpublishing.com/architectsdata>

Detective

Samantha Adams, whose Palo Alto beat usually covers petty crimes, is innocently thrown into a high-profile case that is more complicated than any she has faced before. A renowned reconstructive surgeon and a respected family man, Dr. Taylor was beloved and admired. But beneath his perfect façade was a hidden life—in fact, multiple lives. Dr. Taylor was married to three very different women in three separate cities. As the circumstances surrounding his death emerge, Detective Adams finds herself tracking down a murderer through a tangled web of marital deception and revenge. New York Times–bestselling author Alice LaPlante’s haunting and complex novel of family secrets dissects—with scalpel-like agility—the intricacies of desire and commitment,

trust and jealousy. “Exhilarating and smart, *A Circle of Wives* is a wild ride of love, loss, marriage and murder, with a finale that’s provocative, thrilling and grand. It all shows that while some deaths are a mystery, so, too, are some loves.” —San Francisco Chronicle

This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and

other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and

windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason.

Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

This Design and Development Guide is an essential book for those who are involved in the initiation, planning, design and building of facilities for the various performing arts, from local to metropolitan locations. It includes the stages in the development, decisions to be taken, information requirements, feasibility and advice necessary in the design and development of a new or adapted building. Part one of this guide provides the background information about the organisation of the performing arts, the prevailing issues, the client and various building types. In the second part, the author deals with the components of design and development, identifying the roles of the client, advisors and consultants, the stages to be achieved, including client's proposal

feasibility, the process of briefing, design and building and eventually hand-over and opening night, with a consideration of the building use. Studies include the assessment of demand, site requirements, initial brief, building design and financial viability. Information requirements, as design standards, for the auditorium and platform/stage, and the support facilities, are included. Separate studies focus on the adaptation of existing buildings and provision for children and young persons. THE CONTENT COVERS A WIDE RANGE OF PERFORMING ARTS (CLASSICAL MUSIC, POP/ROCK, JAZZ, MUSICALS, DANCE, DRAMA) AND PROVIDES INFORMATION ON EACH AS AN ART FORM AND NECESSITIES TO HOUSE PERFORMANCES.

Envy was first published in German in 1966, then in an English translation in 1970. This classic study is one of the few books to explore extensively the many facets of envy--"a drive which lies at the core of man's life as a social being."

Ranging widely over literature, philosophy, psychology, and the social sciences, Professor Schoeck--a distinguished sociologist and anthropologist--elucidates both the constructive and destructive consequences of envy in social life. Perhaps most importantly he demonstrates that not only the impetus toward a totalitarian regime but also the egalitarian impulse in democratic societies are alike in being rooted in

envy.

Compassionate Therapy explores the characteristics of difficult clients and the nature of client resistance. Arguing that conflict can be a constructive force, it shows how practitioners can use the struggle to examine their own abilities, deepen their compassion, and improve therapeutic flexibility and effectiveness. It offers proven approaches to working through therapeutic impasses with difficult clients and blends professional development with personal growth.

Robert Peurifoy was a giant in the field of construction engineering and authored several books during his lifetime. This book last published in 1989 and will capitalize on the well-known name of the author. In this edition, computer calculations of costs and of modeling have been added as well as updated statistics, computer related examples and new problems. Civil, Environmental, and Construction Management Engineering Majors and Professionals will benefit from having this title on their shelf. This edition retains the conceptual strengths of the Peurifoy approach and organization from

the previous edition but the new problems and computer-based examples and new up-to-date construction data make it the only choice in academia or industry.

Mass Production of Beneficial Organisms: Invertebrates and Entomopathogens, Second Edition explores the latest advancements and technologies for large-scale rearing and manipulation of natural enemies while presenting ways of improving success rate, predictability of biological control procedures, and demonstrating their safe and effective use. Organized into three sections, Parasitoids and Predators, Pathogens, and Invertebrates for Other Applications, this second edition contains important new information on production

technology of predatory mites and hymenopteran parasitoids for biological control, application of insects in the food industry and production methods of insects for feed and food, and production of bumble bees for pollination. Beneficial organisms include not only insect predators and parasitoids, but also mite predators, nematodes, fungi, bacteria and viruses. In the past two decades, tremendous advances have been achieved in developing technology for producing these organisms. Despite that and the globally growing research and interest in biological control and biotechnology applications, commercialization of these technologies is still in progress. This is an essential reference and teaching tool for researchers in developed and developing

countries working to produce “natural enemies in biological control and integrated pest management programs. Highlights the most advanced and current techniques for mass production of beneficial organisms and methods of evaluation and quality assessment Presents methods for developing artificial diets and reviews the evaluation and assurance of the quality of mass-produced arthropods Provides an outlook of the growing industry of insects as food and feed and describes methods for mass producing the most important insect species used as animal food and food ingredients
