"A wide survey over four millennia is possible for quarrying tools and techniques because of their simplicity and long-lived traditions. The chief contribution of the Romans was their organisation of the stone trade by mass production, standardisation and long-distance transport. Indeed, in post-Roman Europe, especially in Britain, it was the excellence of Roman building stone which allowed so much subsequent 'quarrying' in the buildings themselves. One exception in Saxon times was the quarry for Bradford-on-Avon's church. With the 12th-century spurt in church building activity, however, natural stone quarries once more became common and distribution methods familiar to the Roman world re-emerged." - COPAC.

Multi-Agent Systems are a promising technology to develop the next generation open distributed complex software systems. The main focus of the research community has been on the development of concepts (concerning both mental and social attitudes), architectures, techniques, and general approaches to the analysis and specification of multi-agent systems. This contribution has been fragmented, without any clear way of "putting it all together", rendering it inaccessible to students and young researchers, non-experts, and practitioners. Successful multi-agent systems development is guaranteed only if we can bridge the gap from analysis and

design to effective implementation. **Multi-Agent Programming: Languages, Tools and Applications** presents a number of mature and influential multi-agent programming languages, platforms, development tools and methodologies, and realistic applications, summarizing the state of the art in an accessible manner for professionals and computer science students at all levels.

Egypt, with its ever-growing wealth of evidence from the papyri, has in recent decades been one of the liveliest areas of scholarship on the later Roman Empire. This volume collects two dozen articles on the social, economic, and administrative history of Egypt by Roger Bagnall, whose book 'Egypt in Late Antiquity' has helped

to bring this region and this evidence into the mainstream of historical debate. In these studies some of the main themes of his work are visible, in particular attempts to explore the possibilities for quantifying not only questions like the burden of taxation or the distribution of land-ownership, but more tantalizing and controversial matters like the rate at which the population of Egypt was Christianized.
