Saudi Aramco and Its World Princeton University Press

A Brookings Institution Press and Chatham House publication Ninety percent of the world's oil reserves are entrusted to state-owned companies. Originally created as political instruments, these so-called national oil companies (NOCs) face new demands amid today's dwindling oil reserves and simmering social pressures. Increasingly, state-owned oil firms—particularly in the Middle East—are having to balance the political demands of their governments with the need to be commercially competitive. In this groundbreaking new volume, Valerie Marcel draws on unprecedented access to the politicians, engineers; and businessmen directing five Middle Eastern state oil companies to shed light on one of the most secretive segments of the international oil industry. The author tells the stories of Saudi Aramco, Kuwait Petroleum Corp., the National Iranian Oil Co., Sonatrach of Algeria, and the Abu Dhabi National Oil Co.—oil titans which together produce one quarter of the world's oil and hold half of the world's known oil and gas reserves. Dr. Marcel explains the complex bond between each state and its oil company, tracing the relationship's evolution from the politically charged days of foreign concessions to today's world of profit-driven decisionmaking. Drawn from over 120 interviews with company executives, middle managers, and oil-ministry officials, the author identifies a number of surprising new trends in these companies' strategy, and she paints a picture of their nascent sense of corporate identity. The book provides rare, up-to-date insight into how state-owned companies are striking a balance between their national mission and their commercial needs. The book also provides an insider's guide to these companies' unique culture. Executives and researchers in the region—both inside and outside the oil industry—will find it a valuable tool for understanding business in

the Middle East.

Product Description This book discusses the strategic shift in ownership of Aramco, the Saudi Arabian Oil Company, and its potential impact on Aramco's role in a post- privatized world. Scheduled to become an IPO in 2018, Aramco is on the verge of becoming the largest IPO on the market. As the world's largest oil and gas company, Aramco's impending privatization has important implications for the world's petroleum market. This book, therefore, undertakes an analysis of Aramco, examining its history, its current role in Saudi Arabia's economy, and its future role as an IPO. The chapters highlight the likely outcomes for Aramco in proceeding with its planned IPO and privatization, as well as the various policy options and models available to it by drawing on the privatization of other national oil companies in Norway, Russia, Brazil, and China. The book also explores the complexities that will be involved in transforming Saudi Aramco to a privatized company-albeit with significant government oversight and control-and addresses key questions on the issues likely to be faced, such as IPO pricing, the listing, domain, and market capacity, and

potential stakeholders. As such, this book will be of interest to academic researchers studying energy economics, energy policy, and the political economy of the Middle East, as well as private sector decision makers in energy related fields, international organizations, international oil companies, energy commodity traders, and public sector energy policy makers with interest in Saudi Arabia and Aramco's IPO. A Definitive Up-to-Date Reference Wind forces from various types of extreme wind events continue to generate ever-increasing damage to buildings and other structures. Wind Loading of Structures, Third Edition fills an important gap as an information source for practicing and academic engineers alike, explaining the principles of wind loads on structures, including the relevant aspects of meteorology, bluff-body aerodynamics, probability and statistics, and structural dynamics. Written in Line with International Standards Among the unique features of the book are its broad view of the major international codes and standards, and information on the extreme wind climates of a large number of countries of the world. It is directed towards practicing (particularly structural) engineers, and academics and graduate students. The main changes from the earlier editions are: Discussion of potential global warming effects on extreme events More discussion of tornados and tornado-generated damage A rational approach to gust durations for structural design Expanded considerations of wind-induced fatigue damage Consideration of aeolian

vibrations of suspended transmission lines Expansion of the sections on the cross-wind response of tall slender structures Simplified approaches to wind loads on "porous" industrial, mining, and oil/gas structures A more general discussion of formats in wind codes and standards Not dedicated to a specific code or standard, Wind Loading of Structures, Third Edition highlights the general format and procedures related to all major codes and standards, addresses structures of various types, and presents you with topics not typically covered in traditional texts such as internal pressures, fatigue damage by wind forces, and equivalent static wind load distributions.

This book consists of four parts with three chapters each. Part I introduces some useful terms and definitions that are related to the business of mergers and acquisitions. It also lists some of the major mergers that took place during the last decade. Saudis who made significant contributions to the oil industry are also covered in this part. Part II highlights the formation together with a brief about Saudi Aramco, Petromin and Samarec. (Petromin is included as it is very much affected by the creation of Samarec and its merger with Saudi Aramco). Part III describes the actual merger in terms of its resolutions, strategy and implementation. Part IV deals with the impact of such emergence on the organizations, employees and the major joint ventures that were associated with Samarec and Petromin.

Saudi Arabia is at an early stage of its demographic transition to an older population, and so it has an opportunity to prepare early for a rising noncommunicable disease (NCD) epidemic. NCDs, such as cancers, cardiovascular diseases, diabetes, and chronic respiratory diseases and their associated behavioral risk factors—tobacco use, unhealthy diet, and physical inactivity—are an increasing economic and public health challenge. An aging population is expected to significantly increase the prevalence of NCDs and the related demand for costlier health care services. Interventions and reforms to prevent NCDs, and to minimize current and future treatment costs, are needed now, particularly if Saudi Arabia is to achieve the Vision 2030 goal of increasing life expectancy from 75 years in 2021 to 80 years in 2030. To support strategic planning efforts,

Noncommunicable Diseases in Saudi Arabia: Toward Effective Interventions for Prevention assesses the latest evidence on the prevalence and risk factors; explores the health and economic burden of NCDs, as well as their impact on human capital; and identifies key gaps in prevention efforts and ways to address these gaps. The book discusses the need for a national master plan for NCD prevention—one that is selective and targeted, with a particular focus on improving the implementation of cost-effective interventions and achieving results. To be successful, the national master plan will need to take into account the roles of the different stakeholders and their likely responsibilities in implementation. The book will be of interest to all those who work on NCDs in Saudi Arabia and beyond.

A groundbreaking book that dissects a slanderous history dating from cinema's earliest days to contemporary Hollywood blockbusters that feature machine-gun wielding and bomb-blowing "evil" Arabs Award-winning film authority Jack G. Shaheen, noting that only Native Americans have been more relentlessly smeared on the silver screen, painstakingly makes his case that "Arab" has remained Hollywood's shameless shorthand for "bad guy," long after the movie industry has shifted its portrayal of other minority groups. In this comprehensive study of over one thousand films, arranged alphabetically in such chapters as "Villains," "Sheikhs," "Cameos," and "Cliffhangers," Shaheen documents the tendency to portray Muslim Arabs as Public Enemy #1—brutal, heartless, uncivilized Others bent on terrorizing civilized Westerners. Shaheen examines how and why such a stereotype has grown and spread in the film industry and what may be done to change Hollywood's defamation of Arabs.

The COVID-19 pandemic has had a significant impact on the epidemiology and etiology of respiratory tract and gastrointestinal infections. The implementation of control measures such as social distancing and hand hygiene was associated with a decrease in the incidence of some respiratory and gastrointestinal infections caused by other viruses and bacteria. Epidemiological data suggest that the incidence of respiratory tract infections other than SARS-CoV-2 infection has decreased during the COVID-19 pandemic, possibly due to the adoption of several non-pharmaceutical interventions in public areas. Currently, there is very little research on the

interaction between SARS-CoV-2 and other infectious pathogens in terms of microbiome and virome. As a matter of fact, changes in the epidemiology of respiratory and gastrointestinal infections may be due to other causes than SARS-CoV-2-specific control measures. It is still unclear whether these changes might result from direct interaction between SARS-CoV-2 and the microbiome and/or virome. Continuous and ongoing efforts to understand the impact of the COVID-19 pandemic on infectious diseases are critical in advancing scientific discovery for prevention and treatment strategies for future pandemics. Through this research theme, we aim to explore scientific gaps related to our understanding of the changes in epidemiology and pathogenic agents responsible for respiratory tract and gastrointestinal infections during the COVID-19 pandemic.

Guardian of the Holy Land

"Guardian of the Holy Land" is a book about the untold stories of the place which damaged my life and others lives. A country where people are brain washed. It is about the regime who created the school of terrorism. This book discusses some of the Royal family who fooled many people and made fun of many their locals stealing their wealth and health. It is a short book but very informative about what I think is the worst most damaging country the world has right now. A dramatic change should take place at least the way we as human should think of that kingdom.
