"Roadway infrastructure within the United States includes features such as roads, bridges, signs, pavement markings, traffic signals, support commerce and mobility, and is, in essence, a shared financial public resource worthy of being managed at the highest level of efficiency. State departments of transportation (DOTs), local transportation authorities, and federal agencies responsible for the fiscal management of the transportation system have shown a growing interest in advancing the state of practice in managing these critical assets. In addition, the recent congressional passage of Moving Ahead for Progress in the 21st Century Act (MAP-21 Act) has established an outcome-driven, performance-tracking approach that will hold states and metropolitan planning organizations accountable for improving the conditions and performance of their transportation assets. It will therefore increase agency attentiveness to these vital issues. Transportation Asset Management (AM) is a strategic and systematic process of operating, maintaining, upgrading, and expanding physical assets effectively throughout their life cycle. It focuses on business and engineering practices for resource allocation and utilization, with the objective of better decision making based on quality information and well-defined objectives. Advancing AM capabilities and integrating these capabilities across an organization's business units requires self-assessment, alignment, goal setting, and support. This synthesis of transportation asset management practice among state highway agencies will be a timely resource for agencies to identify their current state of practice and determine where they will direct their AM efforts. This synthesis is based on two separate surveys, with additional input from practitioners. The initial survey requested that participants conduct a self-assessment to characterize their agency's AM practices....The self-assessment results reflect current and future (5-year) business practices and the agencies' institutional, organizational, financial, and IT environments. This survey yielded 18 DOT participant responses (see Appendix D). Based on the results of the initial survey, and input from the Topic Panel, a second survey was designed to capture the state of practice and forward looking expectations (for the next 3 to 5 years) among state DOTs. Forty-three agencies participated in this second survey."--p. 1.

Digital Asset Management: Content Architectures, Project Management, and Creating Order out of Media Chaos is for those who are planning a digital asset management system or interested in becoming digital asset managers. This book explains both the purpose of digital asset management systems and why an organization might need one. The text then walks readers step-by-step through the concerns involved in selecting, staffing, and maintaining a DAM. This book is dedicated to providing you with a solid base in the common concerns, both legal and technical, in launching a complex DAM capable of providing visual search results and workflow options. Containing sample job models, case studies, return on investment models, and quotes from many

top digital asset managers, this book provides a detailed resource for the vocabulary and procedures associated with digital asset management. It can even serve as a field guide for system and implementation requirements you may need to consider. This book is not dedicated to the purchase or launch of a DAM; instead it is filled with the information you need in order to examine digital asset management and the challenges presented by the management of visual assets, user rights, and branded materials. It will guide you through justifying the cost for deploying a DAM and how to plan for growth of the system in the future. This book provides the most useful information to those who find themselves in the bewildering position of formulating access control lists, auditing metadata, and consolidating information silos into a very new sort of workplace management tool – the DAM. The author, Elizabeth Ferguson Keathley, is a board member of the DAM Foundation and has chaired both the Human Resources and Education committees. Currently Elizabeth is working with the University of British Columbia and the DAM Foundation to establish the first official certificate program for Digital Asset Managers. She has written, taught, and been actively a part of conferences related to the arrangement, description, preservation and access of information for over ten years. Her ongoing exploration of digital asset management and its relationship to user needs can be followed at her homepage for Atlanta Metadata Authority : [atlantametadata.com](http://atlantametadata.com).

Today's economic environment has again created a situation that includes a rise in foreclosed property, an increased demand for short term housing units, and individuals relocating to other regions of the country who are in need of rental property for housing both short and long term. This new boom in real estate rental housing has increased the demand for both professional and private real estate rental property managers. The career opportunities in the field of property management are varied. Once you have obtained a strong knowledge of property management and an understanding of the marketing requirements and the numbers necessary to achieve profitability, the ability to enter this field successfully will be within your grasp. You can start your own property management firm, making it as large or as small as you desire. You can become an on-staff property manager, marketing specialist or leasing consultant for an established firm in your area. You can obtain a position as a resident manager, which will allow you to obtain a paycheck for your efforts and reduced or even free housing within the rental building or complex. You can take your personal knowledge and skills and combine them with the strong knowledge base you are building to create a customized position that suits your specific needs and skills. Gaining a solid understanding of the fundamentals of rental property management is the first step toward successfully managing your own real estate investment portfolio or entering the field of a professional real estate property manager with more knowledge, tools, and skills than 95% of your competing managers.

In Reinivigorating workplace pensions1 published last November, the Government set out to explore whether there was scope for a new category of defined ambition (DA) pensions that would complement the defined benefit (DB) and defined contribution (DC) structures that currently dominate the market. Automatic enrolment and the single-tier State Pension will provide a firm foundation for saving for retirement. But if the current forms of DC pension saving become the

default alternative to traditional DB, the pension income of future generations from workplace pensions will be more uncertain than for past generations. Over the last 12 months the DA project - a joint project between DWP and the pensions industry - has been exploring options in a middle ground. The Government proposes that the regulation of workplace pension schemes should not focus on the detail of benefit design but on what is important to the member: ensuring that any promise or guarantee, whether from the sponsoring employer or scheme, provider is delivered.

This Government proposes to make it easier for employers to sponsor new pension schemes where benefits accrue on a specified basis (e.g. related to salary); and also to allow additional flexibilities for future accruals only within existing DB schemes, including the possibility of allowing a statutory override to facilitate these changes. The new flexibility will remove constraints from the existing legislative framework while still giving employees the certainty of a pension scheme where the benefits are defined (such as in relation to their salary) with the security of the promise being sponsored by their employer

One key objective of management research is to explain business phenomena. Yet understanding the nature of explanation is essentially a topic in philosophy. This is the first book that bridges the gap between a technical, philosophical treatment of the topic and the more practical needs of management scholars, as well as others across the social sciences. It explores how management phenomena can be explained from a philosophical perspective, and renders sophisticated

philosophical arguments understandable by readers without specialized training. Covering virtually all the major aspects of the nature of explanation, this work will enhance empirical and theoretical research, as well as approaches combining the two. With many examples from management literature and business news, this study helps scholars in those fields to improve their research outcomes.

From a historical point of view, the main activity of investment banks is what today we call security underwriting. Investment banks buy securities, such as bonds and stocks, from an issuer and then sell them to the ?nal investors. In the eighteenth century, the main securities were bonds issued by governments. The way these bonds were priced and placed is extraordinarily similar to the system that investment banks still use nowadays. When a government wanted to issue new bonds, it negotiated with a few prominent "middlemen" (today we would call them investment bankers). The middlemen agreed to take a fraction of the bonds: they accepted to do so only after having canvassed a list of people they could rely upon. The people on the list were the ?nal investors. The middlemen negotiated with the government even after the issuance. Indeed, in those days governments often changed unilaterally the bond conditions and being on the list of an important middleman could make the difference. On the other hand, middlemen with larger lists were considered to be in a better bargaining position. This game was repeated over time, and hence, reputation mattered. For the middlemen, being trusted by both the investors on the list and by the issuing governments was crucial.
