The course is written by experienced authors who have an in-depth knowledge of the CAE exam, and contains material informed by the Cambridge Learner Corpus which highlights typical mistakes made by CAE candidates The Self-study Student's Book contains a self-study section with answers and advice to students studying independently. A Student's Book, Self-study Student's Book, Teacher's Book and Workbooks with and without answers are also available.

A Study of the Relationship Between the Eudemian and Nicomachean Ethics of Aristotle Walter de Gruyter GmbH & Co KG

E. T. A. Hoffmann is seen as a pioneer of both Romanticism and fantasy literature, and his novella, Mademoiselle de Scudéri: A Tale from the Times of Louis XIV is often cited as the first ever

detective story. Hoffman's story 'The Sandman' provided both the inspiration for Léo Delibes's ballet *Coppélia*, and the basis for a highly influential essay by Sigmund Freud, called 'The Uncanny'. Indeed, Freud referred to Hoffman as the "unrivalled master of the uncanny in literature." Many of the demonic and thriller stories, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

The application of statistical techniques to the study of manuscript books, based on the analysis of large data sets acquired through the archaeological observation of manuscripts, is one of the most original trends in codicological research, aiming not only to reconstruct on a sound basis the methods and processes used in book manufacture and their tendential evolution in space and time, but also to interpret them as the result of a dynamic interplay between various and often incompatible needs (of cultural, technical, social and economic nature) that book artisans had to reconcile in the best possible way. The present collection of essays in English translation was guided by the desire to offer a multifarious well-articulated picture of the application of statistical methodology to the various aspects of manuscript production, namely analysis of materials, characterization of book types, manufacturing techniques, planning and use of layout characterization of scripts and scribal

habits. The volume aims to present to a wider readership a series of significant papers which have appeared over the last fifteen years, by means of which the statistical approach continues to demonstrate its vast potential.

Sir Anthony Kenny presents a second edition of his landmark work *The Aristotelian Ethics*, which transformed Aristotle studies in 1978 by showing, on stylistic, historical, and philosophical grounds, that the Eudemian Ethics was a mature work with as strong a claim to be Aristotle's ethical masterpiece as the more widely studied Nicomachean Ethics. In this new edition Kenny offers a critical survey of developments in the field since *The Aristotelian Ethics* was first published. Kenny also addresses the criticisms of his first edition, both accepting those he sees as justified and addressing and refuting those which he feels are

unfounded. The book remains essential reading for anyone interested in Aristotle's ethical works, arguably the most influential ever written.

This third edition includes the corrections made by the late C. Truesdell in his personal copy. It is annotated by S. Antman who describes the monograph's genesis and the impact it has made on the modern development of mechanics. Originally published as Volume III/3 of the famous Encyclopedia of Physics in 1965, this book describes and summarizes "everything that was both known and worth knowing in the field at the time." It also has greatly contributed to the unification and standardization of the concepts, terms and notations in the field.

 How can students be empowered to communicate professionally – as translators, journalists and CCOs? How can professionals engaged in crucial language interactions do the same – pilots, nurses, lawyers and many others? This volume gives answers to these questions, providing insights into critical situations and

good practices from many years of research and teaching in a practice-oriented, research driven School of Applied Linguistics.

In the last decades the field of research on ancient Greek scholarship has been the object of a remarkable surge of interest, with the publication of handbooks, reference works, and new editions of texts. This partly unexpected revival is very promising and it continues to enhance and modify both our knowledge of ancient scholarship and the way in which we are accustomed to discuss these texts and tackle the editorial and exegetical challenges they pose. This volume deals with some pivotal aspects of this topic, being the outcome of a three-year project funded by the Italian Ministry for Education, University and Research (MIUR) on specific aspects of the critical re-appraisal of Homer, Hesiod, Pindar, and Aeschylus in Greek culture throughout antiquity and the Middle Ages. It tackles issues such as the material form of the transmission of the exegesis from papyri to codices, the examination of hitherto unexplored branches of the manuscript evidence, the discussion of some important scholia, and the role played by the indirect tradition and the assimilation of the exegetical heritage in grammatical and lexicographical works. Some strands of the ancient and medieval scholarship are here re-evaluated afresh by adopting an interdisciplinary methodology which blends modern editorial techniques developed for 'problematic' or 'non-authorial' medieval texts with current trends in the history of philology and literary criticism. In their diversity of subject matter and approach the papers collected in the volume give intended readers an

excellent overview of the topics of the project.
