A Gardener's Guide to Plant Names

Herbert Utz Verlag

This book provides both a handy reference to the scientific names of plants and a clearly written account of the ways in which the naming of plants has changed with time and why these changes were necessary. It deals with the problems of using common names for plants against the historical background of our increasing discrimination of kinds of plants. It then goes on to consider landmarks in the standardization of both common and 'scientific' names and the development of internationally agreed principles governing the format and use of names in botany, sylviculture, agriculture and horticulture. From the alphabetical list the reader may interpret the scientific names of plants from any part of the world. For this second edition a number of changes and corrections in both parts have been made. The author has attempted to keep the first part acceptable to the amateur gardener by resisting a temptation to make it a definite guide to the International Code of Botanical Nomenclature. Others have done this already and with great clarity. Revision has allowed the inclusion of a brief comment on both synonymous and illegitimate botanical names and reference to recent attempts to accommodate the various traits and interests in the naming and names of cultivated plants.

Containing thousands of entries of both vernacular and scientific names of Great Plains plants, the literature that informs this exhaustive listing spans nearly 300 years. Author Elaine Nowick has drawn from sources as diverse as Linnaeus, Lewis and Clark, and local university extension publications to compile the gamut of practical, and often fanciful, common plant names used over the years. Each common name is accompanied by a definitive scientific name with references and authority information. Interspersed with scientifically-correct botanical line drawings, the entries are written in standard ICBN format, making this a useful volume for scholars as well as lay enthusiasts alike. Volume 2 indexes the scientific names of those species, followed by listings of all the common names applied to them. Both volumes refer the common and scientific names back to a list of 190 pertinent authoritative sources. [The Names of Plants](#) Createspace Independent Publishing Platform Native plants are drought tolerant, disease resistant, wildlife friendly, and environmentally sound. Experts increasingly encourage gardeners to use natives exclusively. This handy and practical guide focuses on 100 great

native flowers, ground covers, shrubs, ferns, and grasses that will thrive in New England gardens. The presentation is aimed at gardeners, who want concise, practical information. It will also include material on the importance and desirability of using native plants. The heart of this book is 100 two-page spreads, one for each species. The spreads will include facts about the plant of use to a gardener (not a botanist)—where it grows best, when it blooms, the soil conditions in which it thrives, its appeal to wildlife, sunlight requirements, how high it grows, how to propagate it, and how to avoid any problems particular to the species. Each spread will also feature two color photos.

Plants of Mississippi Forgotten Books
Old English had a large number of plant names: more than a thousand are attested. These are listed here, including parts of plants and products of plants. In the main list the following kinds of information are provided: the spelling (including spelling variants), the literal meaning, the etymology (native word or loan-word) and word-formation, equivalents in Modern English, in the Linnéan terminology, and in German, as well as the older Latin names. Cross-references to etymologically or semantically related names are also given. It is furthermore noted if the etymology or the identification of the plant is unclear. The main list is made more accessible and is supplemented by several indices and supplementary lists; these collect, for example, those Old English plant names that survive in Modern English, Old English names for fruits and products of plants, tree names, the Latin names according to the Linnéan system, the Modern English equivalents, and the Modern German equivalents.

Excerpt from *Plants of Mississippi: A List of Flowering Plants and Ferns* Mohr's *Plant Life of Alabama* has been used as a basis for this Bulletin. The arrangement of Engler and Prantl, as adopted in that work has been closely followed here, and the nomenclature used by Mohr has been used in this list, except in a very few instances. No species has been included in the list unless it is found in our herbarium or is mentioned in the notes of the writer or of Mr. T. L. Bailey, or is credited to the State by some reputable author. A few species have been included on the authority of a partial list of plants found with the Hilgard Manuscripts, and presumably made by Dr. Hilgard, though no name was attached to the list. Excerpt from *Descriptive Catalogue and Price-List of Native Plants of the Southern Alleghany Mountains: Fall and Spring, 1891-'92; Including Deciduous and Evergreen Trees, Flowering Shrubs, Hardy Herbaceous Perennials, Vines, Orchids, Ferns, Aquatics and Bog Plants* The well-known botanist and horticulturist, Professor W. A. Stiles, in writing to the *New York Tribune*, says of our greatly favored Highland region It is a fact that no part of the world has furnished the gardens of Europe and America with so many ornamental plants of this kind (shrubs and lawn trees) as this same Alleghany region. Along the course of every rocky stream are masses of the great *Rhododendron* and *Kalmia*, while on the borders are smaller broad-leaved under-shrubs of rarest beauty. But, beyond question, the most beautiful flowering shrubs are the *Azaleas*, and four of the five species which belong to the flora of the continent are here massed together in the greatest profusion and luxuriance. There are a dozen other genera that could be named. Each with a special charm of its own. To these add the species that are small lawn trees in the north, but attain the stature of timber trees here, and we have a group that, for neatness of habit and beauty of foliage, flowers and fruit, and brilliance of autumn coloring, has no rival.
