Every year thousands of people visit the San Juan Islands off the coast of Washington State. With a copy of *Exploring Coast Salish Prehistory* in hand, they will enjoy an introduction both to archaeology in general and to sites within San Juan Island National Historic Park. The Coast Salish people inhabited the San Juans for 5,000 years. One important site on San Juan Island, Cattle Point, was a summer camp where residents engaged in fishing and shellfish harvesting. Native peoples' recollections of activities there have been confirmed by physical evidence in the form of shell middens, fish bones, and other artifacts. Another San Juan site, English Camp, was a winter village

site for 2,000 years. Structural remains provide insight into how people's lives and activities changed over time. Tools found at the site have allowed archaeologists to deduce that early residents ate camas bulbs and other plants, engaged in woodworking, weaving, fishing, and carving, and manufactured and used stone tools. Stein's discussions of the sites and archaeological practices are enhanced by numerous illustrations. Clear photos of different types of artifacts, topographical maps, and other images help the reader to understand how people lived in the San Juans thousands of years ago.

There's something intriguing about a machine with well-crafted wooden parts . . . cogs and cams that fit together "just so" to perform a task. There's also precise challenge in building such a wooden wonder - and a special satisfaction in watching the excitement of those who turn the handle to see what happens. Making Wooden Mechanical Models contains plans for fifteen good-looking and incredibly clever machines with visible wheels, cranks, pistons and other moving parts made of wood. Projects include the: • Oil pumping rig • Flywheel propeller machine • Rack & pinion machine • Harmonic oscillation punch machine • Reciprocating engine •

Cam & fork machine • Combustion engine • Pendulum escapement machine  
The plans call for a challenging variety of techniques and procedures - laminating, cutting cyma curves, tenon wedging, precision drilling, pegging, whittling and more. By completing these projects, woodworkers will gain the know-how to build wooden models of their own design...machines that beg to be set into action, turning the simplest movements into marvelous feats.
