With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other features, digital cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In

Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a

wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.

Jennifer Grant is the only child of Cary Grant, who was, and continues to be, the epitome of all that is elegant, sophisticated, and deft. Almost half a century after Cary Grant's retirement from the screen, he remains the quintessential romantic

comic movie star. He stopped making movies when his daughter was born so that he could be with her and raise her, which is just what he did. Good Stuff is an enchanting portrait of the profound and loving relationship between a daughter and her father, who just happens to be one of America's most iconic male movie stars. Cary Grant's own personal childhood archives were burned in World War I, and he took painstaking care to ensure that his daughter would have an

accurate record of her early life. In Good Stuff, Jennifer Grant writes of their life together through her high school and college years until Grant's death at the age of eighty-two. Cary Grant had a happy way of living, and he gave that to his daughter. He invented the phrase "good stuff" to mean happiness. For the last twenty years of his life, his daughter experienced the full vital passion of her father's heart, and she now—delightfully—gives us a taste of it. She writes

of the lessons he taught her; of the love he showed her; of his childhood as well as her own . . . Here are letters, notes, and funny cards written from father to daughter and those written from her to him . . . as well as bits of conversation between them (Cary Grant kept a tape recorder going for most of their time together). She writes of their life at 9966 Beverly Grove Drive, living in a farmhouse in the midst of Beverly Hills, playing, laughing, dining, and

dancing through the thick and thin of Jennifer's growing up; the years of his work, his travels, his friendships with "old Hollywood royalty" (the Sinatras, the Pecks, the Poitiers, et al.) and with just plain-old royalty (the Rainiers) . . . We see Grant the playful dad; Grant the clown, sharing his gifts of laughter through his warm spirit; Grant teaching his daughter about life, about love, about boys, about manners and money, about acting and living. Cary Grant was given the

indefinable incandescence of charm. He was a pip . . . Good Stuff captures his special quality. It gives us the magic of a father's devotion (and goofballness) as it reveals a daughter's special odyssey and education of loving, and being loved, by a dad who was Cary Grant.

The aim of the Special Issue “Hyperspectral Imaging for Fine to Medium Scale Applications in

Environmental Sciences” was to present a selection of innovative studies using hyperspectral imaging (HSI) in different thematic fields. This intention reflects the technical developments in the last three decades, which have brought the capacity of HSI to provide spectrally, spatially and temporally detailed data, favoured by e.g., hyperspectral snapshot technologies, miniaturized hyperspectral sensors and hyperspectral microscopy imaging. The present book comprises a suite of

papers in various fields of environmental sciences—geology/mineral exploration, digital soil mapping, mapping and characterization of vegetation, and sensing of water bodies (including under-ice and underwater applications). In addition, there are two rather methodically/technically-oriented contributions dealing with the optimized processing of UAV data and on the design and test of a multi-channel optical receiver for ground-based applications. All in all, this

compilation documents that HSI is a multi-faceted research topic and will remain so in the future. Camera Set, Still Picture KS-15(4), (NSN 6220-00-935-7701). Beautiful models with 200 color images.
