### **Case Studies of Emerging Farmers and Agribusinesses in South Africa**

MSU Press

While e-marketing has emerged as an aid in allowing businesses to reach a broader audience, evolutions in computer science and technology have made its comprehension a bit more complex. E-Marketing in Developed and Developing Countries: Emerging Practices aims to create a deeper understanding of the policies and practices that are involved in a successful e-marketing environment.

This publication highlights the strategies and applications currently being used in both developed and developing countries; proving to be beneficial for entrepreneurs, policy makers, researchers, and students wishing to expand their comprehensive knowledge in this field.

**Losing a Parent to Suicide** Routledge  
Evaluating sustainable development is becoming increasingly important in policy making, evaluation practice and the scientific world in general. However, at present, there is neither a generally accepted set of measures and evaluation methods, nor specific standards to be met. Sustainable Development in Europe addresses these issues and presents an important and concise analysis of state-of-

the-art sustainable development evaluation policies, programmes and projects currently at work in Europe. E-Marketing in Developed and Developing Countries: Emerging Practices BRILL  
This book covers sustainable approaches for industrial transformation pertaining to valorization of agro-industrial byproducts. Divided into four sections, it starts with information about the agro/food industry and its byproducts, including their characterization, followed by different green technologies (principle, process strategies and extraction of bioactive compounds) applied for the management of agro industry byproducts. It further explains biotechnological interventions involved in the value addition of these

byproducts. Various regulatory and environmental concerns related to by-product management along with biorefinery concept and future strategies are provided as well. Features: Provides extensive coverage of agro-industrial by products and their environmental impact. Details production of value-added products from agro-industrial waste. Describes environmental legislations and future strategies. Presents multidisciplinary approaches from fundamental to applied and addresses the biorefinery and circular economy. Includes innovative approaches and future strategies for management of agro-industrial waste. This book is aimed at researchers, graduate students and professionals in food science/food engineering, bioprocessing/biofuels/bioproducts/biochemicals and agriculture, bioeconomy, food waste processing, post-harvest processing, and waste management.

Sustainable Development vdf

Hochschulverlag AG

This book analyses processes of desertification from a social science perspective and unravels the policy

related to drivers of desertification. Desertification is addressed both as a concept surrounded by a multitude of different discourses and as a tangible unsustainable process that is connected to a complex set of policies and changing land management practices. The focus is on Southern Europe, where desertification has been a long-standing problem in many areas, and where in some places the loss of productive capacity has worsened considerably over the last few decades. By focusing on four specific case study areas in Portugal, Spain, Italy and Greece, the scope of the book will cover the 'human dimension' of desertification, exploring in particular how the framework of existing policies has affected land management decisions and desertification processes. The emphasis will be on how policies may have contributed to desertification alleviation and mitigation, as well as to a worsening of desertification processes. By using an actor-network approach, the book specifically investigates the importance of networks of actors that shape the nature and direction of policies that affect desertification processes. In this sense, this book aims at providing a first glance

into the complex policy, economic and socio-cultural networks that operate at the local, regional and national levels in areas of Southern Europe affected by desertification, and to analyse how these networks hinder, or promote, the implementation of policies aimed at alleviating the threat of desertification. With its broad remit, this exciting book will appeal to many different audiences, not only including academics and students of various disciplines, but also practitioners at the local, regional (Mediterranean) and international (e.g. EU) spatial levels in a variety of fields such as environmental and agricultural policy-making, agricultural extension services, farming organisations, environmental NGOs, media representatives and many other environmental stakeholder groups.

Digging Deeper: Inside Africa's Agricultural, Food and Nutrition Dynamics

University of Regina Press

Food loss is a serious issue in the United States. It affects all aspects of the supply chain, from farmers to consumers. While much is already known about loss at the consumer level, our understanding of the amount of food that never makes it to this

stage is more limited. The Economics of Food Loss in the Produce Industry focuses on the economics of food loss as they apply to on-farm produce production, and the losses that are experienced early. The book both analyses current food loss literature and presents new empirical research. It draws lessons from those who have encountered these issues by focusing on how past regional or national estimates of food loss have been conducted with varying degrees of success. It includes chapters on several themes: understanding food loss from an economic perspective; efforts to measure food loss; case studies across commodities within the produce industry; and economic risks and opportunities. The commodity case studies provide detailed discussion of factors impacting changes in loss levels within the produce industry, and a wealth of knowledge on strategies and contexts is developed. The book concludes by identifying critical knowledge gaps and establishing future priorities. This book serves as an essential reference guide for academics, researchers, students, legislative liaisons, non-profit associations, and think tank groups in agriculture and

agricultural economics.

**Role of Giant Corporations** Springer Nature

Coined in the 1970s, the term sustainable development and the ideas behind it have enjoyed varying amounts of popularity over the years. And while dire predictions abound, the full impacts of global warming are not known, nor can they be known.

What we do know is that to be sustainable, all societies must adjust to new realities, which include chan

**Source Book of Sustainable Agriculture for Educators, Producers and Other Agricultural Professionals** Routledge

Examines Midwest milk distributors pricing practices. Focuses on Adams Dairy Co. and Adams Dairy, Inc.

**Agri-food trade in Myanmar: Its role in Myanmar's future economic takeoff**

Saskatoon, Sask. : Centre for Agricultural Medicine, University of Saskatchewan Using Dodge County, Georgia, as a case study, Peggy Barlett reveals consumerism, individualism, and short-term decision making as the greatest threats to the family farm. "This book is of value not only to students of agriculture and rural

sociology but also to city dwellers attempting to understand the lure and frustration of family farming.--Choice "An excellent, well-written study that substantially expands our understanding of connections between the micro level of households and the macro level of cultural trends.--American Journal of Sociology

**Assessing the effects of urban expansion on farm land** Taylor & Francis

Academic Paper from the year 2019 in the subject Geography / Earth Science - Regional Geography, University of Gondar, course: Development studies, language: English, abstract: This study is intended to assess the impacts of urban expansion on farm land of the surrounding rural kebeles of Tefki town from the year 2012-2016. Urbanization is recently a rising trend seen all over the world, mostly in an upsetting rate in developing countries. Similarly, most towns in Ethiopia are recently becoming expanded towards the adjacent farm land. The Expansions of these towns were resulted in the conversion of farm land to urban land uses. Specifically, the study focused on evaluating the effects of town expansion on the farmers

(households) in terms of land loss and income, the opportunities of the affected households secured from the town expansion and compensation process. Hence, 166 expansion affected households were selected through snowball sampling, and also 5 officials from different institutions were purposively taken. Thus, the primary data were collected using questionnaires and interview. Secondary data have been also used to triangulate and supplement the first hand information. The collected data were analyzed by using SPSS version 20. The result showed that Tefki town rapidly expanded during the last five years as a result of population growth and industrialization. This expansion made significant effects on farm lands of the surrounding farmers. Although they secured access to certain services, it was also brought effects like loss of agricultural land and other assets including grazing land, and unfair compensation. This expansion has made the households of the surrounding area to lose farm land on which their livelihood used to depend on for long period of time. Every farmer has been made to lose an average of 1 hectare of their owned farm

land. The grazing land of the area has been decreased because of town expansion, and thus made farmers to lack enough place of grazing for their livestock. On the other side, the compensation was not made on time for the affected farmers. The study also found out that the compensation given to the farmers was not fair, and too inadequate to sustain the livelihoods of the affected households. Therefore, a detailed potential effect assessment study should be carried out by the government and other stakeholders prior to implementing urbanization programs so as to minimize the adverse effects of urban

*Sustainable development in Europe*  
Springer Science & Business Media  
This timely Handbook synthesizes and analyzes key issues and concerns relating to the impact of agriculture on both farmers and non-farmers. With a unique focus on humans rather than animals or the environment, the book is interdisciplinary and international in scope, with contributions from sociologists, economists, anthropologists and geographers providing case studies and examples from all six populated

continents.

*Congressional Record* Univ of California Press

The suicide of a parent has life-long consequences; few more traumatic scenarios exist, and counselors often struggle for ways to help clients deal with its effects. Few understand the pain and life-altering effects of these tragedies better than children who have experienced the suicide of a parent. Despite this, there are few texts that incorporate and evaluate the first-person accounts of grief following a suicide while advancing a method for helping. *Losing a Parent to Suicide* analyzes stories of parent suicides and explores the grief and coping processes that follow, discovering the strategies, methods and modes of therapy that have empowered grieving individuals and helped them rebuild their lives.

*Business Income Insurance Demystified: The Simplified Guide to Time Element Coverages (Third Edition)* GRIN Verlag

This book examines supply and value chains in African agriculture, providing both a thorough analysis of existing practices and practical business models for future development. It examines why

Africa is a net importer of food, despite its vast agricultural potential, using the tomato value chain in Ghana as a case study. The book explores commodity value chain structures; commodity clusters, arenas, linkages and business models; systematic constraints within commodity value chains; and value chain profiling in practice among others. It would benefit policy makers, policy implementers, development practitioners, agri-entrepreneurs, researchers and all those who have interests in the transformation of African agriculture. It will also be an excellent reference material for students of agriculture management, agribusiness, agricultural economics, and rural development.

### **Agricultural Ethics - An Invitation**

Routledge

Food wastage has become a major problem with about one third of all food produced for human consumption going to waste, leading to major socioeconomic and environmental consequences in an increasingly resource-constrained world. This volume embraces integrated management as a solution to food and agricultural wastage. It presents methods

to lessen, reuse, recycle, and manage wastage by merging and employing a variety of suitable methods, equipment, and organizational plans. The volume begins with a global overview of the characterization of food and agricultural wastes. It then delves into using food processing applications that use byproducts as sources of valuable bioenergy and recoverable products. It explores methods for reducing, reusing, and recycling waste along with basic and modern environmental practices for food and agricultural waste management. Chapters discuss food waste management in conjunction with enhancing food security and sustainability and management strategies that offset the impact of food and agricultural wastes on the environment. Finally, the book looks at the challenges and opportunities that are associated with food and agricultural waste management across the globe.

**Farming is in Our Blood** Springer Nature  
'Emerging' (or 'black') farmers are often considered a homogeneous group. While individual emerging farmers and agribusinesses in South Africa share a common history, the case studies in this

book show that in fact significant differences exist among them that are often hidden beneath the averaging and aggregation typical of most analytical research. Presenting fifteen case studies of emerging agribusinesses in South Africa, this book has three main objectives: (1) to capture the human stories behind the emerging farms and agribusinesses in South Africa in order to showcase their rich diversity, historical backgrounds, current context, and future directions; (2) to highlight the best practices, opportunities, and challenges facing South Africa's emerging farmers and agribusinesses; and (3) to create a new set of instructional materials for academics and development practitioners, or as a point of reference for other entrepreneurs, members of government, and other practitioners engaged in agriculture and agribusiness. The case study format, a relatively new tool in the field of agribusiness management, allows for a close-up view of the entrepreneurs at the heart of the businesses, providing an ideal lens through which to take a snapshot of the agribusiness landscape of South Africa today.

*Involuntary Exits from Farming* CRC Press  
 The purpose of this book is to assess a variety of economic issues as they relate to agro-biodiversity and show how addressing these issues can assist in agro-biodiversity policy-making. This is illustrated using empirical data from some of the countries (Ethiopia, Nepal and Zambia) which are part of the Genetic Resources Policy Initiative. The empirical chapters apply the relevant economic methods, including regression analysis, choice experiments, hedonic pricing, contingent valuation and farm business income analysis. The authors discuss the economics of managing crop diversity on-farm in the context of crop variety attribute preferences, farmers' perception of agro-biodiversity loss, and value addition and marketing of the products of traditional crop varieties. The case studies include detailed analysis of traditional varieties of groundnut, maize, rice, sorghum, and teff. The results are relevant not only to GRPI countries but also to other countries concerned with the sustainable utilization of these resources. Overall, the studies illustrate how genetic resources issues can be integrated into rural

development interventions.  
Valorization of Agro-Industrial Byproducts  
 Edward Elgar Publishing  
*Creating Urban Agriculture Systems* provides you with background, expertise, and inspiration for designing with urban agriculture. It shows you how to grow food in buildings and cities, operate growing systems, and integrate them with natural cycles and existing infrastructures. It teaches you the essential environmental inputs and operational strategies of urban farms, and inspires community and design tools for innovative operations and sustainable urban environments that produce fresh, local food. Over 70 projects and 16 in-depth case studies of productive, integrated systems, located in North America, Europe, and Asia, are organized by their emphasis on nutrient, water, and energy management, farm operation, community integration and design approaches so that you can see innovative strategies in action. Interviews with leading architecture firms, including WORKac, Kiss + Cathcart, Weber Thompson, CJ Lim/Studio 8, and SOA Architectes, highlight the challenges and rewards you face when creating urban

agriculture systems. Catalogs of growing and building systems, a glossary, bibliography, and abstracts will help you find information fast.

**Family Farming Without State Intervention** BRILL

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in *The Debates and Proceedings in the Congress of the United States (1789-1824)*, the *Register of Debates in Congress (1824-1837)*, and the *Congressional Globe (1833-1873)*

*Farming on the Edge* CRC Press

Soil organic matter (SOM) is the primary determinant of soil functionality. Soil organic carbon (SOC) accounts for 50% of the SOM content, accompanied by nitrogen, phosphorus, and a range of macro and micro elements. As a dynamic component, SOM is a source of numerous ecosystem services critical to human well-being and nature conservancy. Important among these goods and services generated by SOM include moderation of

climate as a source or sink of atmospheric CO<sub>2</sub> and other greenhouse gases, storage and purification of water, a source of energy and habitat for biota (macro, meso, and micro-organisms), a medium for plant growth, cycling of elements (N, P, S, etc.), and generation of net primary productivity (NPP). The quality and quantity of NPP has direct impacts on the food and nutritional security of the growing and increasingly affluent human population. Soils of agroecosystems are depleted of their SOC reserves in comparison with those of natural ecosystems. The magnitude of depletion depends on land use and the type and severity of degradation. Soils prone to accelerated erosion can be strongly depleted of their SOC reserves, especially those in the surface layer. Therefore, conservation through restorative land use and adoption of recommended management practices to create a positive soil-ecosystem carbon budget can increase carbon stock and soil health. This volume of *Advances in Soil Sciences* aims to accomplish the following:

Present impacts of land use and soil management on SOC dynamics  
 Discuss effects of SOC levels on agronomic

productivity and use efficiency of inputs  
 Detail potential of soil management on the rate and cumulative amount of carbon sequestration in relation to land use and soil/crop management  
 Deliberate the cause-effect relationship between SOC content and provisioning of some ecosystem services  
 Relate soil organic carbon stock to soil properties and processes  
 Establish the relationship between soil organic carbon stock with land and climate  
 Identify controls of making soil organic carbon stock as a source or sink of CO<sub>2</sub>  
 Connect soil organic carbon and carbon sequestration for climate mitigation and adaptation  
*Hearings, Reports and Prints of the Senate Committee on Agriculture and Forestry* IGI Global  
 This volume attempts to dig deeper into what is currently happening in Africa's agricultural and rural sector and to convince policymakers and others that it is important to look at the current African rural dynamics in ways that connect metropolitan demands for food with value chain improvements and agro-food cluster innovations. It is essential to go beyond a 'development bureaucracy' and a state-

based approach to rural transformation, such as the one that often dominates policy debate in African government circles, organizations like the African Union and the UN, and donor agencies.  
*ECPGR Report of a Task Force on On-farm Conservation and Management: Second Meeting, 19-20 June 2006, Stegelitz, Germany* Edward Elgar Publishing  
 This book is an outgrowth of a conference that analyzed transformations in farming & farm communities and discussed what might be done to achieve a more socially responsible development. It contains papers that address the pace of change in work & rural society which has proceeded so rapidly that every new development appears to be a cross-roads in which something precious is in danger of being left behind, but something valuable may be gained by taking the right route. Topics of the papers include the importance of work, the family farm, community building, knowledge & skills in the farm community, coping with the farm crisis, land reform, short line railways, farm co-operatives, agricultural chemicals & agribusiness, sustainable alternatives for agriculture, game farming, co-operative

intervention in the farm machinery sector,  
conservation tillage, globalization &

agricultural policy, agrarian radicalism on

the prairies, and farm income support  
systems. Includes index.
