Calculus for the Life Sciences is offered in a blended learning format, with both an in-person component and an online component. The blended learning format means that some of

the time that students spend on self-study and homework in a standard calculus course will be replaced by a requirement to work through online resources (primarily short videos) before coming to class. The two main goals of the textbook are to provide

college students with a thorough grounding in calculus concepts and applications, analytical techniques, and numerical methods and to have maths or biology students understand how, when, and why calculus can be used to model biological phenomena.
