'This is an important book for all concerned with the teaching and learning of English, exploring new and hugely significant areas in a scholarly, thought-provoking and eminently practical way.' - David Stevens, University of Durham, UK Drawing together ideas from a range of disciplines in the study of texts which explore nature, the built environment and issues of climate change and environmental stress, this book shows how English is well placed to develop the cultural, aesthetic and emotional response to environmental themes - both as part of everyday practice and within wider curriculum innovations. Features include: critical reflection on the teaching of secondary English connections with the academic study of ecocriticism and/or key environmental issues suggested teaching activities and/or reflections from classroom practice sources of further reading and information. This work offers a comprehensive account of the development of English as a school subject. It also examines the debates over English which have centred on the National Curriculum and its assessment. Drawing on data from two recent studies,

it investigates what is taught in the English curriculum. Particular attention has been given to the divisions between language and literature in English as well as the debates about the teaching of grammar and Standard English.

Underpinning the analysis is a concentration on the differences and similarities between the primary and secondary curricula. Promoting the importance of English language in contemporary society, the book provides an overview of the current scene.

Key Stage 3 Science Peterson's

If learners in the classroom are to be excited by mathematics, teachers need to be both well informed about current initiatives and able to see how what is expected of them can be translated into rich and stimulating classroom strategies. The book examines current initiatives that affect teaching mathematics and identifies pointers for action in the classroom. Divided into three major sections, it looks at: the changing mathematics classroom at primary, secondary and tertiary level major components of the secondary curriculum practical pedagogical issues of particular concern to mathematics teachers. Each issue is explored in terms of major underpinnings and research in that area, and practical ideas can be drawn from the text and implemented in the reader's classroom practice. Each chapter has been written by a well-respected writer, researcher and practitioner in their field and all share a common goal: to look thoughtfully and intelligently at some of the practical issues facing mathematics teachers and offer their perspectives on those issues.
