This book presents a unified view of evolutionary algorithms: the exciting new probabilistic search tools inspired by biological models that have immense potential as practical problem-solvers in a wide variety of settings, academic, commercial, and industrial. In this work, the author compares the three most prominent representatives of evolutionary algorithms: genetic algorithms, evolution strategies, and evolutionary programming. The algorithms are presented within a unified framework, thereby clarifying the similarities and differences of these methods. The author also presents new results regarding the role of mutation and selection in genetic algorithms, showing how mutation seems to be much more important for the performance of genetic algorithms than usually assumed. The interaction of selection and mutation, and the impact of the binary code are further topics of interest. Some of the theoretical results are also confirmed by performing an experiment in meta-evolution on a parallel computer. The meta-algorithm used in this experiment combines components from evolution strategies and genetic algorithms to yield a hybrid capable of handling mixed integer optimization problems. As a detailed description of the algorithms, with practical guidelines for usage and implementation, this work will interest a wide range of researchers in computer science and engineering disciplines, as well as graduate students in these fields.

Artistic Interventions in Organizations Routledge

Commercial Management: theory and practice defines the role of commercial management within project-oriented organisations, providing a framework for and helping to develop a critical understanding of the factors that influence commercial management practice. It also identifies generic aspects of this practice and provides a theoretical foundation to these activities, by reference to existing and emergent theories and concepts, as well as to relevant management best practice. The book is structured into four parts: Part 1 Introduction – Commercial Management in Project Environments explores the nature of commercial practice within project-oriented organisations at the buyer-seller interface. It presents a Commercial Management framework, which illustrates the multiple interactions and connections between the purchaser's procurement cycle and a supplier's bidding and implementation cycles. Additionally, it outlines the principle activities undertaken by the commercial function, identifies the skills and abilities that support these activities and reviews the theories and concepts that underpin commercial practice. Finally, it identifies areas of commonality of practice with other functions found within project-oriented organisations, plus sources of potential conflict and misunderstanding. Part 2 – Elements of Commercial Theory and Practice covers commercial leadership; exploring strategy; risk and uncertainty management; financial decision-making; and key legal issues. Part 3 – Approaches to Commercial Practice addresses best practice management; and commercial and contracting strategies and tactics. Finally, Part 4 – Case Studies offers two extended case studies: Football Stadia (the Millennium Stadium, Cardiff; the Emirates Stadium, Islington; and Wembley Stadium, London); and Heathrow Terminal 5. The book provides a one-stop-shop to the many topics that underpin commercial management practice from both a demand (buy-side) and a supply (sell-side) perspective. It will help develop an understanding of the issues influencing commercial management: leadership, strategy, risk, financial, legal, best practice management and commercial and contracting strategy and tactics. This book's companion website is at www.wiley.com/go/lowecommercialmanagement and offers invaluable resources for both students and lecturers: • PowerPoint slides for lecturers on each chapter • Sample exam questions for students to practice • Weblinks to key journals and relevant professional bodies

Within the public sector, strategies are not designed to influence markets, but instead to guide operations within a complex environment of multilateral power, influence, bargaining, and voting. In this book, authors David McNabb and Chung-Shingh Lee examine five frameworks public sector organization managers have followed when designing public sector strategies. Its purpose is to serve as a guide for managers and administrators of large and small public organizations and agencies. This book is the product of a combined more than sixty years of researching, teaching and leading organizational seminars on the theory and practice of management applications in industrial, commercial, nonprofit and public sector organizations. The book consists of four parts: Strategic Management and Strategy Fundamentals; Frameworks for Designing Strategies; Examples of Public Sector Strategies; and Implementing Strategic Management. Throughout, the focus is on the widespread value of strategic management and adopting the strategy appropriate for the organization. Including chapters on game theory, competitive forces, resources-based view, dynamic capabilities, and network governance, the authors demonstrate ways that real managers of public sector and civil society organizations have put strategic management to work in their organizations. This book will be of interest to both practicing and aspiring public servants.

Artistic intervention, where the world of the arts is brought into organizations, has increasingly become a research field in itself with strong links to both creativity and innovation. Opportunities for the arts to interact with public and private organizations occur worldwide, but during the last decade artistic interventions have received growing attention in both practice and research. This book is the first comprehensive attempt to map the development of the field and provides an international

overview of the area of artistic interventions and their impact on organizations from different perspectives, ranging from strategic management to organizational development, innovation and organizational learning. Featuring chapters from prominent and emerging scholars, including Nancy J. Adler, Barbara Czarniawska, Lotte Darsø and Alexander Styhre, it places artistic interventions within an international context. The book also offers readers the opportunity to learn from experiences in a varied range of organisations, including newspapers, manufacturing, government, schools, and covers many art-forms, such as music, contemporary dance, painting, photography, and theatre. Using extensive empirical examples, this book is vital reading for researchers and scholars of creativity and cultural industries, as well as innovation, creative entrepreneurship, organizational studies and management.

Theory and Application for Engineers, Managers, and Practitioners Routledge

This edited collection analyses, from multiple disciplinary perspectives, the issue of corruption in commercial enterprise across different sectors and jurisdictions. Corruption is commonly recognised as a major 'social bad', and is seriously harmful to society, in terms of the functioning and legitimacy of political-economic systems, and the day-to-day lives of individuals. There is nothing novel about bribes in brown envelopes and dubious backroom deals, ostensibly to grease the wheels of business. Corrupt practices like these go to the very heart of illicit transacting in both legal markets – such as kickbacks to facilitate contracts in international commerce – and illegal markets – such as payoffs to public officials to turn a blind eye to cross-border smuggling. Aside from the apparent pervasiveness and longevity of corruption in commercial enterprise, there is now renewed policy and operational attention on the phenomenon, prompting and meriting deeper analysis. Corruption in commercial enterprise, encompassing behaviours often associated with corporate and white-collar crime, and corruption in criminal commercial enterprise, where we see corruption central to organised crime activities, are major public policy issues. This collection gives us insight into their nature, organisation and governance, and how to respond most appropriately and effectively.

Tremendous forces for change are radically reshaping the world of work. Disruptive innovations, radical thinking, new business models and resource scarcity are impacting every sector. Although the scale of expected change is not unprecedented, what is unique is the pervasive nature of the change and its accelerating pace which people in organizations have to cope with. Structures, systems, processes and strategies are relatively simple to understand and even fix. People, however, are more complex. Change can have a different impact on each of them, all of which can cause different attitudes and reactions. Managing and Leading People Through Organizational Change is written for leaders with the key responsibility of managing people through transitions. Managing and Leading People through Organizational Change provides a critical analysis of change and transformation in organizations from a theoretical and practical perspective. It addresses the individual, team and organizational issues of leading and managing people before, during and after change, using case studies and interviews with people from organizations in different sectors across the globe. This book demonstrates how theory can be applied in practice through practical examples and recommendations, focusing on the importance of understanding the impact of the nature of change on individuals and engaging them collaboratively throughout the transformation journey.
