List of Plants Collected in the Bahamas, Jamaica and Grand Cayman Penguin Excerpt from Descriptive Catalogue and Price-List of Native Plants of the Southern Alleghany Mountains: Fall and Spring, 1891-'92; Including Deciduous and Evergreen Trees, Flowering Shrubs, Hardy Herbaceous Perennials, Vines, Orchids, Ferns, Aquatics and Bog Plants The well-known botanist and horticulturist, Professor W. A. Stiles, in writing to the New York Tribune, says of our greatly favored Highland region It is a fact that no part of the world has furnished the gardens of Europe and America with so many ornamental plants of this kind (shrubs and lawn trees) as this same Alleghany region. Along the course of every rocky stream are masses of the great Rhododendron and Kalmia, while on the borders are smaller broad-leaved under-shrubs of rarest beauty. But, beyond question, the most beautiful flowering shrubs are the Azaleas, and four of the five species which belong to the flora of the continent are here massed together in the greatest profusion and luxuriance. There are a dozen other genera that could be named. Each with a special charm of its own. To these add the species that are small lawn trees in the north, but attain the stature of timber trees here, and we have a group that, for neatness of habit and beauty of foliage, flowers and fruit, and brilliance of autumn coloring, has no rival. In the main list the following kinds of information are provided: the spelling (including spelling variants), the literal meaning, the etymology (native word or loan-word) and word-formation, equivalents in Modern English, in the Linnéan terminology, and in German, as well as the older Latin names. This book provides both a handy reference to the scientific names of plants and a clearly written account of the ways in which the naming of plants has changed with time and why these changes were necessary. It deals with the problems of using common names for plants against the historical background of our increasing discrimination of kinds of plants. It then goes on to consider landmarks in the standardization of both common and 'scientific' names and the development of internationally agreed principles governing the format and use of names in botany, silviculture,

agriculture and horticulture. From the alphabetical list the reader may interpret the scientific names of plants from any part of the world. For this second edition a number of changes and corrections in both parts have been made. The author has attempted to keep the first part acceptable to the amateur gardener by resisting a temptation to make it a definite guide to the International Code of Botanical Nomenclature. Others have done this already and with great clarity. Revision has allowed the inclusion of a brief comment on both synonymous and illegitimate botanical names and reference to recent attempts to accommodate the various traits and interests in the naming and names of cultivated plants.
