This is the black and white print version. The Ultimate Guide to Remembering High School Physics Fast was created using advanced memory techniques to generate a variety of memory aids. These have been designed specifically to help you succeed and prosper in high school physics. This book is designed to teach you not just how to recall grade 9 and 10 high school physics but also to remember and use it both quickly and effectively. It is at the GCSE and IGCSE level. This is the prerequisite level for AP, A level and IB. This is an essential resource for examinations and homework practice as

well as for personal development in the subject. Here is an example of how it works: Sing a tune (speed = acceleration x time) down the street (distance = time x speed) find a man (force = acceleration x mass) with my guitar (weight = mass x gravity) The first letter of each word links into an equation with easy techniques to change the focus of the equation. With this one catchy phrase you will never forget 4 essential equations! With over 440 answered questions and examples of which over 230 are fully worked through, this book can be used to supplement traditional teaching and textbooks. It is hoped that it will also inspire a joy of learning. The

memory tricks are fun, catchy and usually accompanied by a memorable picture. The book itself is designed to offer the ideal complement to high school physics teaching by providing ways to enable students to learn physics and apply it quickly and confidently. In keeping with high school science it uses the metric system of measurement. This guide will make it easier for all students to remember the equations and key concepts integral to high school physics and to develop and progress quickly and confidently through their course. Once students know and are able to use the equations and other main concepts, physics

becomes easier and more enjoyable. The Ultimate Guide to Remembering High School Physics Fast will also effectively help students with their revision skills and study using mnemonics (memory helpers) and other advanced memory techniques. This book covers the following topics: Chapter 1: Speed, Distance Force and Weight Chapter 2: Momentum, Force, Moment and Mass Chapter 3: Kinetic Energy, Potential Energy and Energy Stored in Mass Chapter 4: Pressure in Solids, Liquids and Gas Chapter 5: Work, Energy, Power and Heat Chapter 6: Radioactivity Chapter 7: Charge, Energy, Efficiency and Electrical Power 1

Chapter 8: Resistors in Series and Parallel, Voltage Across Resistors Chapter 9: Electrical Power 2 and Transformers Chapter 10: Waves, Light and Colors Chapter 11: More Complicated Systems Chapter 12: Bonus Material Look inside the book to find out more!
