Protect Your Organization Against Massive Data Breaches and Their Consequences Data breaches can be catastrophic, but they remain mysterious because victims don't want to talk about them. In Data Breaches, world-renowned cybersecurity expert Sherri Davidoff shines a light on these events, offering practical guidance for reducing risk and mitigating consequences. Reflecting extensive personal experience and lessons from the world's most damaging breaches, Davidoff identifies proven tactics for reducing damage caused by breaches and avoiding common mistakes that cause them to spiral out of control. You'll learn how to manage data breaches as the true crises they are; minimize reputational damage and legal exposure; address unique challenges associated with health and payment card data; respond to hacktivism, ransomware, and cyber extortion; and prepare for the emerging battlefield of cloud-based breaches. Understand what you need to know about data breaches, the dark web, and markets for stolen data Limit damage by going beyond conventional incident response Navigate high-risk payment card breaches in the context of PCI DSS Assess and mitigate data breach risks associated with vendors and third-party suppliers Manage compliance requirements associated with healthcare and HIPAA Quickly respond to ransomware and data exposure cases Make better decisions about cyber insurance and maximize the value of your policy Reduce cloud risks and properly prepare for cloud-based data breaches Data Breaches is indispensable for everyone involved in breach avoidance or response: executives, managers, IT staff, consultants, investigators, students, and more. Read it before a breach happens! Register your book for convenient access to downloads, updates, and/or corrections as they become available. See inside book for details.

Mohs Micrographic Surgery MedMaster Inc.

Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery--even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer--up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

This report is a follow-up to an earlier report published in 2000 (HLP 121-I, session 1999-2000, ISBN 9780104442005), on air travel and health. That report acted as a stimulus to further research into the health of air crew and passengers, and led to a broader examination of such issues. The report

also led to the setting up of the Aviation Health Working Group in 2001, and later the Aviation Health Unit, in 2003, within the Civil Aviation Authority (CAA), which acts as a focal point for aviation health in the UK. In this report the Committee sets out the current situation, and still finds issues that remain of concern, particularly the risk to air travellers of venous thromboembolism (VTE). A WHO study is to examine VTE risk for individuals with existing risk factors, and the Committee urges the Government to continue to support this project. The Committee also believes that further investigation into the effects of fumes on pilots and others should be continued. The Committee has set out a number of recommendations, including: that jet lag should be studied as a confounding effect of DVT; that the Government should explore ways to increase the research capacity in aviation health; that the CAA should implement the recommendations of its own research into aircraft seating standards, and increase the minimum seat pitch to at least 28.2 inches; the Government should also review the level of air passenger duty levied on "premium economy" seating; also that the Government and airlines advise passengers on the proven benefits of good hygiene in the reduction of disease transmission, and that as part of their contingency plans airlines that are flying from areas affected by a pandemic, should provide bacterial wipes to passengers; that the Government and the AHU work together with airlines and others in providing consistent air travel advice to passengers on the risks associated with self-medicating with the intention of preventing DVT.

The goal of eliminating disparities in health care in the United States remains elusive. Even as quality improves on specific measures, disparities often persist. Addressing these disparities must begin with the fundamental step of bringing the nature of the disparities and the groups at risk for those disparities to light by collecting health care quality information stratified by race, ethnicity and language data. Then attention can be focused on where interventions might be best applied, and on planning and evaluating those efforts to inform the development of policy and the application of resources. A lack of standardization of categories for race, ethnicity, and language data has been suggested as one obstacle to achieving more widespread collection and utilization of these data. *Race, Ethnicity, and Language Data* identifies current models for collecting and coding race, ethnicity, and language data; reviews challenges involved in obtaining these data, and makes recommendations for a nationally standardized approach for use in health care quality improvement.
