The *Encyclopedia of Islamic Civilization and Religion* provides scholarly coverage of the religion, culture and history of the Islamic world, at a time when that world is undergoing considerable change and is a focus of international study and debate. The non-Muslim world's perceptions of Islam have often tended to be dominated by unrepresentative radical extremist movements and media interpretations of events involving such movements, to the extent that many people are unaware of the depth and

variety of Islamic thought. At the same time, many who have had a formal training in Islamic studies have tended to concentrate on the traditional, to the exclusion of the contemporary. The *Encyclopedia of Islamic Civilization and Religion* covers the full range of Islamic thought, in historical depth, but it also provides substantial coverage of contemporary trends across the Muslim world. With well over a thousand entries on Islamic theology, history, arts, science, law and institutions, and coverage of Islam in individual countries and cities around the world, the *Encyclopedia of Islamic Civilization and Religion* provides an extremely rich resource for students and researchers in religious studies and Middle Eastern studies. Entries are cross-referenced and bibliographies are provided. There is a full index. Routledge published *The Qura'n: An Encyclopedia* in 2005, an excellent companion to the *Encyclopedia of Islamic Civilization and Religion*. *Foundations and Earth Retaining Structures* Springer Nature  
*In Situ Testing Methods in Geotechnical Engineering* covers the field of applied geotechnical engineering related to the

use of in situ testing of soils to determine soil properties and parameters for geotechnical design. It provides an overview of the practical aspects of the most routine and common test methods, as well as test methods that engineers may wish to include on specific projects. It is suited for a graduate-level course on field testing of soils and will also aid practicing engineers. Test procedures for determining in situ lateral stress, strength, and stiffness properties of soils are examined, as is the determination of stress history and rate of consolidation. Readers will be introduced to various approaches to geotechnical design of shallow and deep foundations using in situ tests. Importantly, the text discusses the potential advantages and disadvantages of using in situ tests.

This is an in-depth study of the people of Bukhara and their relations with settled peoples and nomads, from Muscovy to China, and Iran to India. By using lesserknown, or hitherto untapped sources, it corrects long-held misapprehensions fostered by historians of hostile states and champions of the Timurid dynasty. Far from being afraid of their powerful Safawid and Mughal counterparts, the Uzbek rulers of Bukhara caused them much apprehension and even influenced their foreign policies. 'Abbas I concluded a humiliating peace with Turkey because

he wanted to recover Khurasan from 'Abdallah II, Akbar could not risk leaving Punjab during 'Abdallah's reign, Safawid and Mughal attempts at conquering the khanate failed dismally. The book deals fully with dynastic, internal and external problems, trade routes, coinage policies and the khans' attempts to encourage trade.

Despite significant progress in increasing agricultural production, meeting the changing dietary preferences and increasing food demands of future populations remains a significant challenge. Salinity, drought, water logging, high temperature and toxicity are abiotic stresses that affect the crop yield and production. Tolerance for stress is a important characteristic that plants need to have in order to survive. Identification of proper techniques at a proper time can make it easy for scientists to increase crop productivity and yield. In *Engineering Tolerance in Crop Plants against Abiotic Stress* we have discussed the possible stresses and their impact on crops and portrayed distinctive abiotic stress tolerance in response to different techniques that can improve the performance of crops.

Features of the Book: Provide a state-of-the-art description of the physiological, biochemical, and molecular status of the understanding of abiotic stress in plants. Address factors that threaten future food production and provide potential solution to these factors. Designed to cater to the

needs of the students engaged in the field of environmental sciences, soil sciences, agricultural microbiology, plant pathology, and agronomy. New strategies for better crop productivity and yield. Understanding new techniques pointed out in this book will open the possibility of genetic engineering in crop plants with the concomitant improved stress tolerance. Plants are frequently exposed to unfavorable and adverse environmental conditions known as abiotic stressors. These factors can include salinity, drought, heat, cold, flooding, heavy metals, and UV radiation which pose serious threats to the sustainability of crop yields. Since abiotic stresses are major constraints for crop production, finding the approaches to enhance stress tolerance is crucial to increase crop production and increase food security. This book discusses approaches to enhance abiotic stress tolerance in crop plants on a global scale. Plants scientists and breeders will learn how to further mitigate plant responses and develop new crop varieties for the changing climate.

The 1979 revolution fundamentally altered Iran's political landscape as a generation of inexperienced clerics who did not hail from the ranks of the upper class—and were not tainted by association with the old regime—came to power. The actions and intentions of these truculent new leaders and their lay allies caused major international concern. Meanwhile, Iran's domestic and foreign policy and its nuclear program have loomed large in daily news coverage. Despite global consternation, however, our knowledge about Iran's political elite remains skeletal. Nearly four decades after the clergy became the state elite par excellence, there has been no empirical study of the recruitment, composition, and circulation of the Iranian ruling members after 1979. *Postrevolutionary Iran: A Political Handbook* provides the most comprehensive collection of data on

political life in postrevolutionary Iran, including coverage of 36 national elections, more than 400 legal and outlawed political organizations, and family ties among the elite. It provides biographical sketches of more than 2,300 political personalities ranging from cabinet ministers and parliament deputies to clerical, judicial, and military leaders, much of this information previously unavailable in English. Providing a cartography of the complex structure of power in postrevolutionary Iran, this volume offers a window not only into the immediate years before and after the Iranian Revolution but also into what has happened during the last four turbulent decades. This volume and the data it contains will be invaluable to policymakers, researchers, and scholars of the Middle East alike.

Municipal solid waste (MSW) disposal is an ever-increasing problem in many parts of the world, especially in developing countries. To date, landfilling is still the preferred option for the disposal and management of MSW due to its low-cost operation. While this solution is advantageous from a cost perspective, it introduces a high level of potential pollutants which can be detrimental to the local environment. Control and Treatment of Landfill Leachate for Sanitary Waste Disposal presents research-based insights and solutions for the proper management and treatment of landfill leachate. Highlighting relevant topics on emerging technologies and treatment innovations for minimizing the environmental hazards of waste disposal, this innovative publication contributes to filling in many of the gaps that exist in the current literature available on leachate treatment. Waste authorities, solid waste management companies, landfill operators, legislators, environmentalists, graduate students, and researchers will find this publication beneficial to their professional and academic interests in the area of waste treatment and management.
