The Canon EOS 7D Mark II is an update to the classic 7D model, widely regarded as an excellent APS-C sensor DSLR, aimed at the serious enthusiast. The new model boasts faster burst shooting, improved autofocus and a much broader ISO range, contained in one of its best-built camera bodies. For stills photographers, the Mark II offers an all cross-type, 65-point AF module that works in conjunction with a 150,000-pixel RGB + IR metering sensor, offering the latest version of the 'Intelligent Tracking and Recognition' (iTR) focus system featured in the EOS-1D X. With iTR engaged and an initial focus point selected, focus can be initiated with a half-depress of the shutter-release button, leaving the camera to track the subject as it moves across the frame. The camera's continuous shooting rate is 10 frames per second, previously limited to pro-grade sports cameras. The shutter is rated to more than 200,000 cycles. The main image sensor is a variant of the Dual Pixel AF design first seen in the Canon EOS 70D, offering 20MP output. Using its image sensor, the camera can capture information about subject position and depth whenever its mirror is raised. This potentially gives more decisive autofocus and subject tracking in 'Live View' and while shooting video. The Mark II's movie capabilities have been improved, offering 1080p/60 shooting capability and a choice of MOV or MP4 format, plus three compression options (IPB-Lite, IPB and All-I). AUTHOR: David Taylor is an award-winning landscape and travel photographer, born and raised in Newcastle upon Tyne, Tyne and Wear. His work has taken him all over the world, but away from his photographic career David lives on an exposed hill, overlooking the market town of Hexham in Northumberland.

David Busch's Canon EOS Rebel T7i/800D Guide to Digital SLR Photography Rocky Nook, Inc.

THE PHOTOGRAPHY AND CINEMATOGRAPHY GUIDE YOU NEED TO MASTER YOUR CANON EOS 70D The 7D Mark II is as big as some smaller full-frame bodies, measuring 4.4 by 5.9 by 3.1 inches (HWD), and its 2-pound weight is heavy in the hand. Its dense body features magnesium alloy construction, its 1/8,000-second shutter is rated to 200,000 cycles, and the body is sealed to protect it from dust and water. We weren't able to take our 7D test unit apart, but a teardown by the folks at Lensrentals shows just how extensive the camera's weather-sealing is. The result is an extremely durable body that feels a lot more solid than the company's entry-level full-frame offering, the EOS 6D (4.4 by 5.7 by 2.8 inches, 1.7 pounds). There are some design choices that had to be made to achieve the durability the 7D Mark II promises to deliver. The rear LCD is a fixed panel, which isn't quite as useful for video as the vari-angle display that Canon uses in the midrange 70D, and the magnesium alloy chassis means that there's no built-in Wi-Fi, as an all metal build interferes with wireless data transmission. That didn't stop Canon from including a GPS module, which adds location data to images when enabled; Sony went the opposite route with its Alpha 77 II, omitting a GPS and including Wi-Fi, as well as a hinge-mounted display. Canon doesn't include a lot of controls on the face of the camera, just the depth of-field preview button and a button that raises the built-in pop-up flash. The former can be reprogrammed for other functions via the camera menu, so you can use it to halt the AF system (useful if you know that you're locked onto your target), lock exposure, or perform a few other sundry functions. When held down, the flash release allows you to configure the functionality of the built-in pop-up flash. It can set for E-TTL II, manual, or strobe output, and you can set it to be a commander for external Speedlites and also set whether it should fire in 1st Curtain or 2nd Curtain mode. The 7D can sync with a strobe at exposures as short as 1/250-second. Want to discover more about your device? Get Canon EOS 7D MK II User Guide now to get started
