## CANTRELL MATHEWS

**Economic and Social Survey of Asia and the Pacific, 1978** Asian Development Bank

This report analyzes how closer regional connectivity and economic integration between South Asia and Southeast Asia can benefit both regions, with a focus on the role played by infrastructure and public policies in facilitating this process. It examines major developments in South Asian–Southeast Asian trade and investment, economic cooperation, the role of economic corridors, and regional cooperation initiatives. In particular, it identifies significant opportunities for strengthening these integration efforts as a result of the recent opening up of Myanmar in political, economic, and financial terms. This is particularly the case for land-based transportation—highways and railroads—and energy trading. The report's focus is on connectivity in a broad sense, covering both hardware and software, including investment in infrastructure, energy trading, trade facilitation, investment financing, and support for national and regional policies.

**Economic and Social Survey of Asia and the Pacific 2014**

Brookings Institution Press

This book records the first success stories of a new form of financial intermediation, the hometown investment fund, that has become a national strategy in Japan, partly to meet the need to finance small and medium-sized enterprises (SMEs) after the devastating earthquake and tsunami in March 2011. The hometown investment fund has three main advantages. First, it contributes to financial market stability by lowering information asymmetry. Individual households and firms have direct access to information about the borrowing firms, mainly SMEs, that they lend to. Second, it is a stable source of risk capital. The fund is project driven. Firms and households decide to invest by getting to know the borrowers and their projects. In this way the fund distributes risk but not so that it renders risk intractable, which was the problem with the "originate and distribute" model. Third, it contributes to economic recovery by connecting firms and households with SMEs that are worthy of their support. It also creates employment opportunities, at the SMEs as well as for the pool of retirees from financial institutions who can help assess the projects. Introduction of the hometown investment fund has huge global implications. The world is seeking a method of financial intermediation that minimizes information asymmetry, distributes risk without making it opaque, and contributes to economic recovery. Funds similar to Japan's hometown investment fund can succeed in all three ways. After all, the majority of the world's businesses are SMEs. The first chapter explains the theory behind this method, and the following chapters relate success stories from Japan and other parts of Asia. This book should encourage policymakers, economists, lenders, and borrowers, especially in developing countries, to adopt this new form of financial intermediation, thus contributing to global economic stability.

**Mega-Regional Trade Agreements** Penerbit USM

A review of the Araceae of Peninsular Malaysia, including its off-shore islands, is presented as a precursor to revising the family for the Flora of Peninsular Malaysia project. The aroid flora of Peninsular Malaysia comprises 28 genera and ca 140 indigenous (of which 17 provisionally accepted) with 25 species (ca 17%) endemic. Peninsular Malaysia has no endemic aroid genera. As compared to Thailand with 29 genera, ca 200 species of which 62 species (ca 30%) are endemic, and Borneo where 38 genera (of which are 10 endemic), and currently 670 indigenous species of which more than 40% are undescribed and about 95% are endemic. An historical review of Araceae research in Peninsular Malaysia, and keys to higher taxa are provided. Most genera are illustrated. Universiti Sains Malaysia, Penerbit Universiti Sains Malaysia

**The Araceae of Peninsular Malaysia (Penerbit USM)** World Bank Publications

As Asia grows and prospers, its economies are increasingly vital to each other -and to the world. Led by a team of ADB staff, scholars, and advisers to regional policy makers, this study highlights what is at stake the emerging Asian regionalism and lays out the ground for further discussion on how to move forward.

**Master Plan on ASEAN Connectivity** World Scientific Publishing Company

A strong and widely acknowledged record of economic success—including a three-and-a-half-fold increase in per capita income since 1994—places Rwanda among the world's fastest-growing economies. Traumatic memories of the 1994 genocide are gradually fading, as associations begin to take a more positive form—of a nation on the rise, powered by human resilience, a sense of common purpose, and a purposeful government. Past successes and a sense of frailty have fueled aspirations for a secure, prosperous, and modern future. Sustaining high rates of economic growth is at the heart of these ambitions. Recent formulations of the nation's Vision 2050 set a target of achieving upper-middle-income status by 2035 and high-income status by 2050. **Future Drivers of Growth in Rwanda: Innovation, Integration, Agglomeration, and Competition**, a joint undertaking by experts from Rwanda and the World Bank Group, evaluates the country's possibilities and options in this endeavor. The report identifies four essential drivers of growth—innovation, integration, agglomeration, and competition—and reforms in six priority areas: human capital development, export dynamism and regional integration, well-managed urbanization, competitive domestic enterprises, agricultural modernization, and capable and accountable public institutions.

**Preferential Trade and Investment Agreements** Brookings Institution Press

Asia's remarkable economic performance and transformation since the 1960s has shifted the center of global economic activity toward Asia, in particular toward the Association of Southeast Asian Nations (ASEAN) economies, the People's Republic of China, and India (collectively known as ACI). While these dynamic developing economies do not form any specific institutional group, they constitute very large economies and markets. These emerging Asian giants share common boundaries, opportunities, and challenges. Their trade, investment, production, and infrastructure already are significantly integrated and will become more so in the coming decades. This book focuses on the prospects and challenges for growth and transformation of the region's major and rapidly growing emerging economies to 2030. It examines the drivers of growth and development in the ACI economies and the factors that will affect the quality of development. It also explores the links among the ACI economies and how their links may shape regional and global competition and cooperation.

**ASEAN Economic Integration** Advanced Research on Asian Eco

This book investigates long-term development issues for members of the Association of Southeast Asian Nations (ASEAN). It finds that with the proper policy mix—including domestic structural reforms and bold initiatives for regional integration—ASEAN has the potential to reach by 2030 the average quality of life enjoyed today in advanced economies and to fulfill its aspirations to become a resilient, inclusive, competitive, and harmonious (RICH) region. Key challenges moving forward are to enhance macroeconomic and financial stability, support equitable growth, promote competitiveness and innovation, and protect the environment. Overcoming these challenges to build a truly borderless economic region implies eliminating remaining barriers to the flow of goods, services, and production factors; strengthening competitiveness and the institutional framework; and updating some governing principles. But ASEAN should not merely copy the European Union. It must maintain its flexibility and pragmatism without creating a bloated regional bureaucracy. The study's main message is that through closer integration, ASEAN can form a partnership for achieving shared prosperity in the region and around the globe.

**Pan-Asian Integration** United Nations (Un)

Over the last decade, information and communication technologies (ICT) have been increasingly used to achieve development goals. Developing countries, including poorer ones, have enjoyed rapid technological progress to help pull millions of people out of poverty. ICTs help transform economic and social activities for firms, governments and citizens. Information and Communication for Development 2009: Scaling Up Impact, the second issue of the World Bank's IC4D series, focuses on the effect of increased access to advanced ICT services and development of a vibrant IT sector on sustaining growth.

**ASEAN, PRC, and India** Springer

The Survey 2014 examines the region's challenges to support its economic growth and to promote inclusive and sustainable development. Part I of the report focuses on the region's outlook as it contends with the ongoing global economic uncertainty and assesses the region's policy response to remaining and emerging vulnerabilities. It also examines the role of sustainable agriculture

in closing the development gaps in least developed countries. A special theme is domestic resource mobilisation in the region, which explores the challenges on strengthening tax revenues. Part II of the report discusses strategic approaches to strengthen regional connectivity to achieve shared prosperity, particularly the ways in which various networks facilitate trade, production networks and investment flows within the region.

**ASEAN-India** ASEAN Secretariat

After 3 years of historic reforms, Myanmar has entered a pivotal stage in its socioeconomic development. Natural, cultural, and demographic advantages are positioning the country for long-term success, but many challenges and potential pitfalls lie ahead. This publication examines how to leverage the opportunities and offers solutions to the challenges. For Myanmar to achieve its economic transition, considerable investments will have to be made in infrastructure and developing human capital, and progress made on building institutional capacity, a regulatory environment for the private sector to flourish, and a modern finance sector. In all reform efforts, the government should embrace good governance, and strive for inclusive, environmentally sustainable, and regionally connected growth. Ensuring that the benefits of growth are shared broadly and regionally balanced stands out in a crowded development agenda.

**Emerging Asian Regionalism** Nomos Verlagsgesellschaft

This book examines the economic, political and institutional dimensions of pan-Asian integration. With little progress made in the Doha Round, there is heightened interest in deeper regional integration in Asia. The book explores regional patterns of trade and investment and the potential for deeper integration. **Reform of Industrial Relations** World Bank Publications Given the rapid emergence of regional economic arrangements in Asia, especially in Southeast Asia, it is useful to understand clearly what regionalism implies for the region, as well as to take stock as to the far-reaching and complicated effects of formal economic cooperation and integration. This book allows the reader to better understand the relevant international policies of the Southeast Asian economies, and to appreciate the potential lessons for other developing regions. It also focuses on the regionalism trend with an explicit application to ASEAN, as well as the implications of regionalism in the developed countries. The goal of this book is to survey the economics and political economy of regionalism in the ASEAN context from a variety of perspectives and using various techniques, from standard economic analysis of preferential trading arrangements to the political economy analysis of institutions. Its approach is comprehensive in that it includes ASEAN economic integration in the areas of trade, foreign direct investment, and finance. Presentation of the material is designed to be accessible to non-technical audiences without sacrificing the rigor expected by economists and other experts.

**Containerisation International Yearbook** Springer Science & Business Media

This book provides an in-depth analysis of "Mega-Regionals", the new generation of trans-regional free-trade agreements (FTAs) currently under negotiation, and their effect on the future of international economic law. The main focus centres on the EU-US Transatlantic Trade and Investment Partnership (TTIP), the Trans-Pacific Partnership (TPP) and the EU-Canada Comprehensive Economic and Trade Agreement (CETA), but the findings are also applicable to similar agreements under negotiation, such as the Regional Comprehensive Economic Partnership (RCEP). The specific features of Mega-Regional Trade Agreements raise a number of issues with respect to their potential effect on the current system of international trade and investment law. These include the consequences of Mega-Regionals for the most-favoured-nation (MFN) principle, their relation to the multilateral system of the World Trade Organization (WTO), their democratic legitimacy and their interaction with existing bilateral investment treaties (BITs). The book is intended for academics and practitioners working in the field of international economic law. **Connecting South Asia and Southeast Asia** International investment law no longer exclusively consists of self-standing investment protection treaties, but increasingly comprises preferential trade and investment agreements (PTIAs) that integrate rules on investment and trade. This book explores the impact of this new form of investment agreement on international investment relations. It asks whether PTIAs break with the rationale and objective of bilateral investment treaties or constitute their logical continuation, and whether PTIAs further fragment international trade and investment relations or create a

more harmonious universe of international economic law.

2009 Information and Communications for Development

After more than three decades of average annual growth close to 10 percent, China's economy is transitioning to a 'new normal' of slower but more balanced and sustainable growth. Its old drivers of growth -- a growing labor force, the migration from rural areas to cities, high levels of investments, and expanding exports -- are waning or having less impact. China's policymakers are well aware that the country needs new drivers of growth. This report proposes a reform agenda that emphasizes productivity and innovation to help policymakers promote China's future growth and achieve their vision of a modern and innovative China. The reform agenda is based on the three D's: removing Distortions to strengthen market competition and enhance the efficient allocation of resources in the economy; accelerating Diffusion of advanced technologies and management practices in China's economy, taking advantage of the large remaining potential for

catch-up growth; and fostering Discovery and nurturing China's competitive and innovative capacity as China approaches OECD incomes in the decades ahead and extends the global innovation and technology frontier.

*Seventy New Malayan Mammals*

In the emerging narrative of sustainable development in Asia, the essential challenge is to reduce the use of natural resources and environmental degradation alongside the increasing demand for goods and services. To achieve this, Sustainable Consumption and Production (SCP), one of the Sustainable Development Goals (SDGs) adopted by the United Nations in 2015, aims at reconciling the three goals of minimising the extraction of natural resources from the environment, limiting waste and emissions over the life cycle of goods and services and improving human development and wellbeing. *Sustainable Asia: Supporting the Transition to Sustainable Consumption and Production in Asian Developing Countries* provides an overview and analysis of the current status

of SCP in Asian developing countries. The book focuses on projects supported by the EU-funded SWITCH-Asia Programme, a regional development cooperation programme promoting the adoption of SCP practices among small and medium-sized enterprises (SMEs) and consumer groups in Asia since 2007. For readers looking for a comprehensive introduction to the topic of SCP together with a detailed analysis of the current developmental situation in various Asian developing countries and key sectors such as manufacturing, tourism, renewable energy and agriculture, this book is an invaluable tool. The book examines in detail the SCP approaches and innovative solutions demonstrated by the SWITCH-Asia supported projects in Asia and thus serves as a reference for practitioners, researchers and policymakers alike.
