Once the season starts, most cyclists are saving every spare moment for the road. The miles to ride in preparation for upcoming races leave little time for fundamentals like strength training or cross-training. This is just one of the reasons why Thomas Chapple argues that the success of the upcoming season depends on the extent to which you can build your foundation of aerobic fitness, or your "base," for the road ahead. After identifying a cyclist's strengths and limiters, it is time to sacrifice the volume of training and the perceived level of fitness in order to increase intensity and broaden the aerobic base. In effect, this builds a bigger engine and the cyclist is then able to work back up to the higher volumes and an overall improved levels of fitness and speed. But Chapple's guidance for cyclists extends past the important off-season months to establish a more efficient plan for the upcoming year. A stronger base makes a stronger, faster cyclist.

As a kid, John Custer watched westerns, so when he got his first bike, it was his 'horse'. He rode it everywhere. As the years clicked by, his 'horse' got set aside. After college, he started his own funeral home and ambulance business. When he retired, he took an old bike, made it rideable, and rode it to the top of a nearby hill. That ride rekindled his desire to ride. He set it aside again for a couple of years while he and his wife, Marlene, did volunteer work in Thailand, China, and The Philippines. Most of his riding has been around Ohio, with tours, small groups, and solos. On one vacation he and Marlene cycled Nova Scotia. During his retirement, his relationship with Jesus Christ has continued to grow. In *Pedal 'n Ponder* he merges his two passions in an earthy fashion. The idea of writing this devotional came while planning to ride from the Mississippi River to the Atlantic Ocean. This devotional is targeted for those who have cycling on the front burner and a relationship with Jesus on the back burner-

--if it is on any burner at all. The readers will be challenged to consider who Jesus is and what He said.

The bicycle is almost unique among human-powered machines in that it uses human muscles in a near-optimum way. This new edition of the bible of bicycle builders and bicyclists provides just about everything you could want to know about the history of bicycles, how human beings propel them, what makes them go faster, and what keeps them from going even faster. The scientific and engineering information is of interest not only to designers and builders of bicycles and other human-powered vehicles but also to competitive cyclists, bicycle commuters, and recreational cyclists. The third edition begins with a brief history of bicycles and bicycling that demolishes many widespread myths. This edition includes information on recent experiments and achievements in human-powered transportation, including the "ultimate human-powered vehicle," in which a supine rider in a streamlined enclosure steers by looking at a television screen connected to a small camera in the nose, reaching speeds of around 80 miles per hour. It contains completely new chapters on aerodynamics, unusual human-powered machines for use on land and in water and air, human physiology, and the future of bicycling. This edition also provides updated information on

rolling drag, transmission of power from rider to wheels, braking, heat management, steering and stability, power and speed, and materials. It contains many new illustrations.
