The Indian Ocean is famously referred to as the "cradle of globalization," as it facilitated cultural and economic exchanges between Africa, the Arab world, the Indian subcontinent, Southeast Asia, and China, for 5000 years prior to European presence in the region. As this ocean's significance has gained increasing attention from scholars in recent years, few have examined the 'human' dimensions in Indian Ocean exchanges. Including the work of historians, geographers, anthropologists and literary analysts, each essay in this volume addresses a specific human factor, such as the fate of the creole in the Bay of

Bengal, creolization as a globalized phenomenon, migrancy and diaspora, the lives of seafarers then and now, and the lives of those who inhabit the ocean's littoral. This volume is a necessary addition to the field of Indian Ocean studies.

The modern aspiring astronomer is faced with a bewildering choice of commercially produced telescopes, including all the designs considered in the preceding chapter. Yet only four decades ago the choice for a small telescope would have been between just a refractor and a Newtonian reflector. That change has come about because of the enormous interest that has grown in astronomy since the start of the space age and with the mind-boggling discoveries of the past 30 or 40 years. Except for some of the very small instruments which are unfortunately often heavily promoted in general mail order catalogues, camera shops and the like, the optical quality of these commercially produced

telescopes is almost uniformly excellent. Although one product may be slightly better for some types of observation, or more suited to the personal circumstances of the observer, than another, most of them will provide excellent observing opportunities. The same general praise cannot be applied, however, to the mountings with which many of these telescopes are provided, and those problems are covered in Chapter 6.
