From the beginning of the 19th century to the present day, a host of campaigners have denounced the mistreatment of animals. Relying on a comparison of the British and French experiences, this book retraces the various strands of the animal protection movement, from their origins to their continuing impact on current debates. The story of the collective

mobilizations behind the struggle for animal rights sheds light on several crucial processes in our social and political history: changes in sensibilities and socially approved emotions; the definition of what constitutes legitimate violence; the establishment of norms designed to change what constitutes morally acceptable practices; rivalry between elites having differing

conceptions of the forms authority should take; the influence of religious belief on militant activities; and the effects of gender discrimination. --

Protest and Social Movements This volume collects the state of the art in molecular materials. It collects the lecture notes of a series of lectures given by some of the best specialists in the field at the 2007 Erice International

School of Crystallography, and also a NATO-ASI course. The school first established "where we are" in terms of modeling, design, synthesis and applications of crystalline solids with predefined properties and then defined current and possible futuristic lines of development.

Global optimization aims at solving the most general problems of deterministic

mathematical programming: to find the global optimum of a nonlinear, nonconvex, multivariate function of continuous and/or integer variables subject to constraints which may be themselves nonlinear and nonconvex. In addition, once the solutions are found, proof of its optimality is also expected from this methodology. Therefore, with these difficulties in mind, global optimization is becoming an

increasingly powerful and important methodology. Essays and Surveys in Global Optimization is the most recent examination of its mathematical capability, power, and wide ranging solutions to many fields in the applied sciences.

Pulp and paper mill industries are always associated with the disposal problem of highly contaminated sludge or bio-solids. The development of innovative systems to maximize recovery of

useful materials and/or energy in a sustainable way has become necessary.

The management of wastes, in particular of industrial waste, in an economically and environmentally acceptable manner is one of the most critical issues facing modern industry, mainly due to the increased difficulties in properly locating disposal works and complying with even more stringent

environmental quality requirements imposed by legislation. This book presents a general Introduction on waste management in the pulp and paper industry and contains topics on the generation of waste in pulp and paper mills, waste composition, methods of sludge pre-treatment, processes and technologies for conversion of pulp and paper mill waste into valuable products,

waste reduction techniques employed in the pulp and paper Industry worldwide and future trends.

The author

exposes the Vatican's involvement in world politics, intrigues, and the fomenting of wars throughout history. It appears, beyond any doubt, that the Roman Catholic institution is not a Christian church and never was. The poor Roman Catholic people have been betrayed by her and are facing spiritual disaster. Paris shows that Rome is responsible for the two great world wars. Author

Edmond Paris explains why he wrote this book... "The public is practically unaware of the overwhelming responsibility carried by the Vatican and its Jesuits in the start of the two world wars -- a situation which may be explained in part by the gigantic finances at the disposition of the Vatican and its Jesuits, giving them power in so many spheres, especially since the last conflict." "In fact, the part they took in those tragic events has hardly been mentioned until the present time, except by apologists eager to disguise it. It is with the aim of rectifying this and establishing the true facts that we present in this and other books the political activity of the Vatican during the contemporary -- activity which mutually concerns the Jesuits." "This study is based on irrefutable archive documents, publications from well-known political personalities, diplomats, ambassadors and eminent writers, most of whom are Catholics, even attested by the imprimatur."

Applauded for its superior grammar sequencing, four-skills presentation and practice, vocabulary control, and supportive pedagogy, CONTACTS remains one

of the most popular Introductory French programs available. Now in its Eighth Edition, the program continues to reflect the realities of the contemporary French and Francophone worlds and to serve the communication needs of the new millennium. Its hallmark strengths-- highly effective logical progression, clear organization, and supportive pedagogy--

which have served more than half a million CONTACTS users so well, are enhanced in the Eighth Edition by the iLrn Heinle Learning Center. Everything your students need to master the skills and concepts of the course is built into this dynamic learning environment. The iLrn Heinle Learning Center includes an audio-enhanced eBook, assignable

textbook activities, companion videos with pre- and post-viewing activities, partnered voice-recorded activities, an online workbook and lab manual with audio, interactive enrichment activities, and a diagnostic study tool to help them prepare for exams. The authors' heightened emphasis on interpersonal communication skills in this edition, presented through a

broad range of stimulating activities that engage students in the many facets of the French-speaking world, is also further enhanced by the iLrn Heinle Learning Center. Interventional Pericardiology gives a unique and comprehensive view on an often neglected but clinically very important part of cardiovascular disease: The pericardium and the adjacent myocardium or epicardium. The authors of this up-to-date compendium on pericardial disease etiology, diagnostics and treatment, Professors Bernhard Maisch (Marburg), Arsen Ristić (Belgrade), Petar Seferović (Belgrade) and Teresa Tsang (Rochester) focus on recent advances to the new window that has been opened to the heart by flexible and video-assisted pericardioscopy, modern biochemical, immunohistological and molecular tools for the analysis of epicardial and pericardial biopsies, which have been acquired safely under pericardioscopic control by the interventional pericardiologist. Their book adds brand-new information to the recent and so far only guidelines world-wide by the European Society of Cardiology on the management

of pericardial diseases. This task-force has been chaired by the lead author B. Maisch. Accordingly "Interventional Pericardiology" belongs in every medical library and on the desk of every cardiologist, interventionalist, and trainee with an interest in pericardial diseases. *Entre Amis* Springer Science & Business Media The history of Jean de Labadie and

the Labadists has received attention through the years. That attention, however, has more often than not fallen short in its tracing of Labadie's 'double migration'. Disaffected with the established church order of his day and motivated by a sense of prophetic mission to establish again the life of the primitive church, this spiritual nomad wandered from France to

Switzerland, then to the United Provinces, Germany and Denmark, according to the vicissitudes of the times. As he went, he changed his affiliations from 'high' church to 'lower', from the bosom of Rome to Calvinism, then to congregational separatism. Thus there has been ample reason to treat Labadie's life and ministry episodically, be it a geographical or

denominational episode, and a solid grounding could be had by piecing together several of these (all listed in bibliography part D): M. de Certeau on the Jesuit years; X. de Bonnault d'Houet on his stay at Amiens; A-L. Bertrand on the 'lost years' from Amiens to Montauban; J-H. Gerlach and W. Goeters on the schism at Middelburg; P. Scheltema on Amsterdam; L. Holscher and G.E. Guhrauer on Herford; J. Lieboldt and H. von Schubert on Altona; B.B. James and H.C. Murphy on the colony in Maryland; L. Knappert on that in Surinam; and any number of authorities on the Labadists in Friesland. Yet there are significant gaps. French All-in-One For Dummies Cambridge University Press Miniaturization and high precision are rapidly becoming a requirement for many industrial processes and products. As a result, there is greater interest in the use of laser microfabrication technology to achieve these goals. This book composed of 16 chapters covers all the topics of laser precision processing from fundamental aspects to industrial applications to both inorganic and biological materials. It reviews the state of the art of research and technological development in the area of

laser processing.

Most innovations in the car industry are based on software and electronics, and IT will soon constitute the major production cost factor. It seems almost certain that embedded IT security will be crucial for the next generation of applications. Yet whereas software safety has become a relatively well-established field, the protection of automotive IT systems against manipulation or intrusion has only recently started to emerge. Lemke, Paar, and Wolf collect in this volume a state-of-the-art overview on all aspects relevant for IT security in automotive applications. After an introductory chapter written by the editors themselves, the contributions from experienced experts of different disciplines are structured into three parts. "Security in the Automotive Domain" describes applications for which IT security is crucial, like immobilizers, tachographs, and software updates. "Embedded Security Technologies" details security technologies relevant for automotive applications, e.g., symmetric and

asymmetric cryptography, and wireless security. "Business Aspects of IT Systems in Cars" shows the need for embedded security in novel applications like location-based navigation systems and personalization. The first book in this area of fast-growing economic and scientific importance, it is indispensable for both researchers in software or embedded security and

professionals in the automotive industry. [APA Handbook of Consumer Psychology](#) Springer Science & Business Media This groundbreaking work is the first to cover the fundamentals of hydrogeophysics from both the hydrogeological and geophysical perspectives. Authored by leading experts and expert groups, the book starts out by explaining the fundamentals

of hydrological characterization, with focus on hydrological data acquisition and measurement analysis as well as geostatistical approaches. The fundamentals of geophysical characterization are then at length, including the geophysical techniques that are often used for hydrogeological characterization. Unlike other books, the geophysical methods and

petrophysical discussions presented here emphasize the theory, assumptions, approaches, and interpretations that are particularly important for hydrogeological applications. A series of hydrogeophysical case studies illustrate hydrogeophysical approaches for mapping hydrological units, estimation of hydrogeological parameters, and monitoring of hydrogeological processes. Finally, the book concludes with hydrogeophysical frontiers, i.e. on emerging technologies and stochastic hydrogeophysical inversion approaches. *Engineering of Crystalline Materials Properties* Springer Science & Business Media
 There comes a time in the affairs of every organization when we have to sit down and take stock of where we are and where we want to go. When the International Heat Flow Committee (as it was first called), IHFC, was formed in 1963 at the San Francisco International Union of Geodesy and Geophysics with Francis Birch as its first Chairman, the principal purpose was to stimulate work in the basic aspects of geothermics, particularly the measurement of terrestrial heat-flow density (HFD) in what were

then the 'geothermally underdeveloped' areas of the world. In this, the IHFC was remarkably successful. By the beginning of the second decade of our existence, interest in the economic aspects of geothermics was increasing at a rapid pace and the IHFC served as a conduit for all aspects of geothermics and, moreover, became the group responsible for collecting data on all

types of HFD measurements. In all the tasks that are undertaken, the IHFC relies on the enthusiasm of its members and colleagues who devote much of their time to the important but unglamorous and personally unrewarding tasks that were asked of them, and we are fortunate that our parent institutions are usually quite tolerant of the time spent by their employees on IHFC work.

This open access book deals with imaging of the abdomen and pelvis, an area that has seen considerable advances over the past several years, driven by clinical as well as technological developments. The respective chapters, written by

internationally respected experts in their fields, focus on imaging diagnosis and interventional therapies in abdominal and pelvic disease; they cover all relevant imaging modalities, including magnetic resonance imaging,

computed tomography, and positron emission tomography. As such, the book offers a comprehensive review of the state of the art in imaging of the abdomen and pelvis. It will be of interest to general radiologists, radiology residents, interventional

radiologists, and clinicians from other specialties who want to update their knowledge in this area.
