JOVANI BIANCA

Cambridge IGCSE® and O Level Economics Revision Guide

Cambridge University Press
Tells a story about the strange relationship of two migrant workers who are able to realize their dreams of an easy life until one of them succumbs to his weakness for soft, helpless creatures and strangles a farmer's wife.

Cambridge IGCSE Computer Science Collins
Covers the Cambridge IGCSE syllabus (0455) and the Cambridge O Level syllabus (2281), first examination from 2020. Economics relates to every aspect of our lives, from the decisions we make as individuals to the structures created by governments and firms. Thinking like an economist can help us all

make better choices. With exam-style questions and specific skills practice, this revision guide helps students build their knowledge and understanding of economic theory, giving them confidence to achieve their potential in examinations. Answers are at the back of the book so that students are free to self-study.

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on

one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the

previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below:

Cognitive skills: nonroutine problem solving, critical thinking, systems thinking
 Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity
 Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning
 Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.
