Nanotechnology and Global Sustainability Springer Science & Business Media

This book offers an analysis of external dimensions of an emerging economy, India, in the backdrop of neoliberal globalisation. External dimensions of Indian economy signify her inter-relation with the rest of the world in terms of trade and financial flows and how that affects the development process within the country in the age of neoliberal globalisation. It is based on non-mainstream unorthodox approach in Economics and as such is a critique of the mainstream neoclassical position on current neoliberal globalisation. The contents of the book can be

classified into as follows – (1) India's external dimension in the colonial period through the trade route ; (2) concerns with India's balance of payments transactions in terms of illegal flows, (3) political economy of development planning in the present era of globalisation, (4) capital flows as it affect the India's external front, (5) Indian industries under the TRIPs regime, (6) regional economic integration of India and (7) foreign capital flows in India during the liberalisation period. The entire book is an attempt to decipher the meaning and significance the process of globalisation produces for the real economy of India. The uniqueness of the book is that in one place one can find different unorthodox positions dealing with the external dimensions of emerging India, which cannot be found in any other book.

Impact of FDI on the Growth of Pharmaceutical Sector in India: A Study with Special Reference to Post-Liberalization Scenario
Springer

The book presents a comprehensive view of the Indian equity markets over the past two decades (1994-2014). Equity markets constitute the most important segment of stock exchanges; in fact, the status of equity returns is, by and large, considered as a barometer of the state of a country's economy. Returns earned by the equity investors on their funds invested in equity markets have become a decisive factor in the growth of such markets. In this context, the book discusses all the major aspects of equity returns and also conducts a dis-aggregative analysis based on underlying factors like age, size, ownership structure, industry affiliation/sector, among others, to explain the factors affecting returns and risk. While on the one hand the study ascertains the market rates of return (earned) on equities from the investors' perspective (by including both the capital gains and the dividend income), it also shows how to compute the rates of returns on equities from the corporate perspective (that is, rate of return earned on equity funds). It further assesses the required/expected rate of return and examines the volatility in stock returns, with a focus on its behaviour during the period of the study. It deepens investors' understanding of equity investment, helping them to make more-informed investments. While of interest to the investor community, this book also contributes significantly to the existing literature on market returns and is a valuable reference

resource for academics, researchers and market participants, financial institutions and other intermediaries, regulators and policy makers.

The rise of collaborative consumption, peer-to-peer systems, and not-for-profit social enterprise heralds the emergence of a new era of human collectivity. Increasingly, this consolidation stems from an understanding that big-banner issues—such as climate change—are not the root causes of our present global predicament. There is a growing and collective view that issues such as this are actually symptoms of a much more vicious, seemingly insurmountable condition: our addiction to economic, consumption, and population growth in a world of finite resources. *Nanotechnology and Global Sustainability* uses nanotechnology—the product of applied scientific knowledge to control and utilize matter at atomic and molecular scales—as a lens through which to explore the interrelationship between innovation, politics, economy, and sustainability. This groundbreaking book addresses how stakeholders can actively reshape agendas to create positive and sustainable futures through this latest controversial, cross-sectoral technology. It moves beyond issues of efficiency, productivity, and utility, exploring the insights of 22 contributors from around the world, whose work spans the disciplines of science and the humanities. Their combined knowledge, reinforced with various case studies, introduces an exciting prospect—how we can innovate without economic growth. This new volume in the *Perspectives in Nanotechnology* series is edited by Dr. Donald Maclurcan and Dr. Natalia Radywyl. Dr. Maclurcan is a social innovator and Honorary Research Fellow with the Institute for Nanoscale Technology at the University of Technology Sydney, Australia. Dr. Radywyl is a social researcher and Honorary Research Fellow in the School of Culture and Communication at the University of Melbourne, Australia. She is also an Adjunct Research Fellow in the Faculty of Life and Social Sciences at Swinburne University of Technology, Melbourne. This book is written for a wide audience and will be of particular interest to activists, scholars, policy makers, scientists, business professionals, and others who seek an understanding of how we might justly transition to sustainable societies.

[A Practitioner's Guide to European Patent Law](#) Routledge
 It is a casebook on patent law that involves comparative

jurisprudence tailored for India. The book is best described by highlighting the following features: (1) Casebook format - The casebook format suits practitioners and judges. It allows the reader to independently interpret and assess the implication of each caselaw, which forms a vital component of the practice of law. The reader is assisted towards this objective by only containing extracts of the relevant portions of the judgment. Even from an academic perspective, it provides an unfiltered view of the law, better than any unnecessary prose. (2) Comparative approach - For each topic of patent law, the book would provide a single point congregation of the relevant Indian provisions and extracts from relevant caselaw across India, the UK, the EU and the USA. This approach is ideal for India, where jurisprudence on the subject is limited. Courts, practitioners, and the Patent Office often resort to such a comparative approach to learn from the experiences of other jurisdictions. (3) Notes - Author's notes before and after each caselaw or topic fulfil four purposes: (i) set the context for the reader; (ii) critique the caselaw or to bring focus on to issues that arise in practice; (iii) contextualize the discussion to the Indian statute; and (iv) examine the historical perspective, including the legislative history. (4) Focus on law - it is a no-nonsense, no-rhetoric book, focussing on the law, its

interpretation and application.

Regulations and Applications of Ethics in Business Practice Thakur Publication Private Limited

Contract manufacturing relationships (CMRs) have become an integral part of pharmaceutical supply chains. Solid regulation, technological complexity, and high investment pressure encourage collaboration between client companies and CMOs. Due to the high complexity of pharmaceutical value creation and

high relevance for clients, CMRs always move in a field of tension between client control and trust-based self-governance. Against this background, the study investigates the success factors of excellent relationship management of pharmaceutical CMRs. A consortium of seven pharmaceutical companies representing the client and the CMO side is involved in the study to ensure the practicality of the results. First, the study findings give insights into purposeful relationship development amid internal and external dynamics. Second, the study discusses current tailoring practices and provides a method-supported process for conducting meaningful partner differentiation. Third, the study addresses the need for partner alignment to achieve through the concept of the Relationship Gap to systematically include perceptions, business, and partner behavior expectations in relationship management.
